The Academic Life Burton R. selective enterprise that provides a careful selection of key topics in essays written by top scholars in their fields Comprehensive and in depth coverage of a limited number of countries regions and themes is provided The essays not only feature statistical and factual information but significant interpretation of those facts and figures The chapters on themes and topics are both analytic and interpretative and deal with the most important topics relevant to higher education everywhere More than a compendium of facts and figures the encyclopedia is a comprehensive overview of a growing field of research and analysis

The Serials Partnership Patricia Ohl Rice, Joyce L. Ogburn, 2019-12-05 This book first published in 1990 reflects the partnership among those who create produce distribute and manage serials information Lively and informative this volume addresses several highly important topics including the process of scholarly communication the differences among types of serials vendors and whether or not a library should consolidate orders with a single vendor and organizational and institutional concerns about the current journal pricing crisis

The University and its Disciplines Carolin Kreber, 2010-07-15 University teaching and learning take place within ever more specialized disciplinary settings each characterized by its unique traditions concepts practices and procedures It is now widely recognized that support for teaching and learning needs to take this discipline specificity into account However in a world characterized by rapid change complexity and uncertainty problems do not present themselves as distinct subjects but increasingly within trans disciplinary contexts calling for graduate outcomes that go beyond specialized knowledge and skills This ground breaking book highlights the important interplay between context specific and context transcendent aspects of teaching learning and assessment It explores critical questions such as What are the ways of thinking and practicing characteristic of particular disciplines How can students be supported in becoming participants of particular disciplinary discourse communities Can the diversity in teaching learning and assessment practices that we observe across departments be attributed exclusively to disciplinary structure To what extent do the disciplines prepare students for the complexities and uncertainties that characterize their later professional civic and personal lives Written for university teachers educational developers as well as new and experienced researchers of Higher Education this highly anticipated first edition offers innovative perspectives from leading Canadian US and UK scholars on how academic learning within particular disciplines can help students acquire the skills abilities and dispositions they need to succeed academically and also post graduation Carolin Kreber is Professor of Teaching and Learning in Higher Education and the Director of the Centre for Teaching Learning and Assessment at the University of Edinburgh

Academic Disciplines John C. Smart, Kenneth A. Feldman, Corinna A. Ethington, 2000 Using as a framework the theory of careers developed by John L. Holland the authors of this volume examine the patterns of student stability and change inherent in the college experience as well as the variations in professional attitudes and behaviors of college faculty Their goal is to learn more about what colleges and universities might do to facilitate the retention satisfaction and learning of their students For example why should faculties split over student oriented teaching strategies one group favoring the

formal structured classroom the other a freer more spontaneous environment Why do some undergraduates become independent thinkers with strong analytical mathematical and scientific competencies while others develop powerful interpersonal and group leadership skills Holland's theory at its core a person environment fit theory assumes that there are six personality types and six analogous academic environments and that the educational persistence satisfaction and achievement of students are a function of the congruence or fit between students and their academic environments The authors also assume that there are circumstances under which the environments of the major field exert more influence on students than do the students own personality traits Applying Holland's theory to distinctive clusters of academic disciplines the authors have found that the answers to such fundamental questions as those asked above emanate from a basic understanding of the influences of academic disciplines and the manner by which they shape the patterns of thought and behavior of both college students and faculty Academic Disciplines will benefit researchers and graduate students who study college students and faculty as well as administrators and policymakers responsible for the performance of colleges and universities

Scholars in the Changing American Academy William K. Cummings, Martin J. Finkelstein, 2011-12-02 As the nature of education generally and higher education in particular changes irrevocably it is crucial to understand the informed opinions of those closest to the institutions of learning This book based on a survey of academics in 19 nations and conducted by leading global scholars is a thorough sounding of the attitudes of academics to their working environment As the post WWII liberal consensus crumbles higher education is increasingly viewed as a private and personal investment in individual social mobility rather than as a public good and ipso facto a responsibility of public authorities The incursion of corporate culture into academe with its stakeholders performance pay and obsession with competitiveness is a matter of bitter debate with some arguing that short termism is obviating epoch making research which by definition requires patience and persistence in the face of the risk of failure This book highlights these and many other key issues facing the academic profession in the US and around the world at the beginning of the 21st century and examines the issues from the perspective of those who are at the front line of change This group has numerous concerns not least in the US where government priorities are shifting with growing budget pressures to core activities such as basic education health and welfare Drawing too on comparable surveys conducted in 1992 the book charts the actual contours of change as reflected in the opinions of academics Critically the volume explicitly compares and contrasts the situation of American academics with that of academics in other advanced and developing economies Such an assessment is critical both for Americans to chart the future of their indigenous tertiary enterprise but also for shaping the response of the nations around the world who contemplate applying the American model to their own national systems
