The Accident Syndrome:

Foreign Accent Syndrome (FAS): The Speech Characteristics of Foreign Accent Syndrome David Stehling, 2012-11-26
Seminar paper from the year 2009 in the subject English Language and Literature Studies Linguistics grade B University of Wales Bangor course Speech and Language Disorders language English abstract After a brain injury e.g. a stroke areas of the brain can be damaged permanently. Thus a lesion on the brain can have long term consequences for the concerned person such as paralysed decreased reflexes altered sensory perception memory deficits and/or speech and comprehension impairments. The latter may include aphasia i.e. affection of Broca's or Wernicke's area causing an inability to produce or comprehend language apraxia impairment of voluntary movements or foreign accent syndrome also known as altered accent syndrome. The foreign accent syndrome FAS is a disorder that is still not completely researched since according to Katz et al 2008 537 its symptomatology and underlying bases are poorly understood. Nevertheless there are some cases that have been described and examined. This essay deals with the main speech characteristics of FAS and the relative extent to which segmental and prosodic features are affected in this disorder. Therefore the syndrome will be defined and described first. In the succeeding section the segmental and prosodic features of FAS are taken into consideration. The last part contains the classification of FAS with respect to other speech and language disorders such as apraxia aphasia and dysarthria whether it is a mere sub type of these disorders or if it should be treated separately.

Foreign Accent Syndromes Jack Ryalls, Nick Miller, 2014-08-13 What does it feel like to wake up one day speaking with a foreign accent from a country one has never visited? Why does someone wake up doing this? This book seeks to portray the broad and diverse experiences of individuals with a rare neurological speech disorder called Foreign Accent Syndrome FAS. Through a combination of personal testimony and scientific commentary the book aims to shed unprecedented light on the understanding of FAS by elucidating the complex links between how the brain produces speech how listeners perceive speech and the role that accent plays in our perception of self and others. The first part of the book provides a comprehensive introduction to FAS and covers a number of key subject areas including The definition and phenomenology of FAS A history of research on FAS The causes and psychosocial consequences of FAS A guide to further reading and a glossary of specialized terms. The chapters in part two provide a unique insight into the condition through personal testimony and accounts from family members. This collection of 28 testimonies from across the world underlines the importance of listening carefully to patients explain their cases and in their own words. The final section contains a questionnaire for use by clinicians to support case history taking. The authors are two leading global experts on FAS and this is the first volume of its kind to provide such a broad and comprehensive examination of this rare and poorly understood condition. It will be of great interest to practising clinicians in neurology psychiatry psychology and speech and language therapy pathology as well as students in health disciplines relevant to neurorehabilitation linguists and also to families and caregivers.

The Apallic Syndrome E. Rothenmund, G. Dalle Ore, F.

Gerstenbrand, C. H. Lücking, G. Peters, U. H. Peters, 2012-12-06 The subject of the apallic syndrome is one which has long been familiar to me although I have not personally studied it as deeply as I would have wished I became acquainted with this syndrome long before the last war when my neurosurgical colleague Hugh Cairns 1952 made his pioneer contribution under the term akinetic mutism This was an ar resting title but it was one which did not altogether satisfy some of his colleagues includ ing myself We found it difficult to suggest an alternative That is one reason why I wel come the expression apallic syndrome Forensic practice has forced me from time to time to consider rather more deeply this distressing syndrome and to try and marshal my ideas in a form which would satisfy my colleagues in the legal profession More than once I have been instructed to make a medico legal assessment of these unfortunate patients The points which have concerned my lawyer friends have not been matters of diagnosis or of morbid anatomy or of etiology The fac tual problem which has been put before me was to make some approximate assessment as to the expectation of life Vague guess work is unacceptable in such circumstances What the lawyers require is a precise and dogmatic answer
