The Active Earth David Lambert, 1981 **Living on an Active Earth** National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Science of Earthquakes, 2003-09-22 The destructive force of earthquakes has stimulated human inquiry since ancient times yet the scientific study of earthquakes is a surprisingly recent endeavor Instrumental recordings of earthquakes were not made until the second half of the 19th century and the primary mechanism for generating seismic waves was not identified until the beginning of the 20th century From this recent start a range of laboratory field and theoretical investigations have developed into a vigorous new discipline the science of earthquakes As a basic science it provides a comprehensive understanding of earthquake behavior and related phenomena in the Earth and other terrestrial planets As an applied science it provides a knowledge base of great practical value for a global society whose infrastructure is built on the Earth's active crust This book describes the growth and origins of earthquake science and identifies research and data collection efforts that will strengthen the scientific and social contributions of this exciting new discipline *The active earth* Tony Crisp, 1979 **Recommendations on Excavations** Deutsche Gesellschaft für Geotechnik, 2003-11-14 The aim of these recommendations is to harmonize and further develop the methods according to which excavations are prepared calculated and carried out Since 1980 these have been drawn up by the working group for excavations at the German Society for Geotechnics Deutsche Gesellschaft für Geotechnik under the name EAB and are similar to a set of standards All the main software programs in Germany are based on these recommendations The recommendations help in designing and calculating excavation constructions unifying approaches to loads and methods of calculation Since they are based on an approved global safety concept following these recommendations ensures the stability and usability of excavations and their individual components Furthermore they help to improve the profitability of excavation constructions The result is a work of major importance for all experts concerned with the planning and calculation of excavations Numerical Modeling in Micromechanics via Particle Methods H. Konietzky, 2002-01-01 Particle methods have seen increasing use in several engineering and scientific fields both because of their unique modelling capabilities and the availability of the necessary computational power This title focuses on their theory and application **Recommendations of the Committee for Waterfront Structures Harbours and Waterways** HTG, 2015-11-09 The EAU 2012 takes into account the new generation of standards which is shortly to be introduced into the building control system it consists of Eurocode 7 the associated national application documents and additional national regulations DIN 1054 2010 In certain cases partial safety factors are determined differently based on experience in practice This means that the safety standard of sea and port buildings remains in place the recommendations nevertheless satisfy the requirements for international recognition and application regarding the planning design specification tender procedure construction and monitoring as well as the handover of and cost accounting for port and waterway systems under uniform
