Price,Libor

Jansky,Andrei A. Iatsenia,2004 Mountain areas cover almost one quarter of the earth s land surface with a quarter of the global population living on them or very close by and they are sources of water food timber minerals and other natural resources They provide many opportunities for recreation as well as being centres of biological and cultural diversity and religious significance Unfortunately mountain environments and populations are also particularly threatened by climate change and political conflicts and their inhabitants include many of the poorest and most vulnerable in the world This publication includes a number of papers which explore a range of sustainable development challenges for mountain regions

Eastern Ghats Environment Outlook , Eastern Ghats Environment Outlook **Advances in Geocomputing** Huilin Xing,2009-02-07 Geocomputing can simulate geodynamics crustal dynamics earthquakes tsunami and rock physics Arctic Alpine Ecosystems and People in a Changing Environment Jon Børre Ørbaek,Roland Kallenborn,Ingunn Tombre,Else N. Hegseth,Stig Falk-Petersen,Alf H. Hoel,2007-01-10 This book addresses the significant environmental changes experienced by high latitude and high altitude ecosystems at the beginning of the 21st century Increased temperatures and precipitation reduction in sea ice and glacier ice the increased levels of UV radiation and the long range transported contaminants in arctic and alpine regions are stress factors that challenge terrestrial and aquatic ecosystems The large natural variation in the physical parameters of these extreme environments is a key factor in structuring the biodiversity and biotic productivity and the effect of the new stress factors can be critical for the population structures and the interaction between species These changes may also have socio economic effects if the changes affect the bio production which form the basis for the marine and terrestrial food chains The book is uniquely multidisciplinary and provides examples of various aspects of contemporary

environmental change in arctic and alpine regions The 21 chapters of the book are organised under the fields of Climate change and ecosystem response Long range transport of pollutants and ecological impacts and UV radiation and biological effects each also including aspects of the Socio economic effects of environmental change The introductory chapter presents and explains the internal connection and integration of all chapters The added value of these reviews and review like manuscripts from different disciplines hopefully yields new information about the integrated aspects of environmental change

The Light in High Places Joe Hutto, 2014-06-03 Hutto is living in a tent at twelve thousand feet where blizzards occur in July and where human wants become irrelevant and human needs can become a matter of life and death to study the Rocky Mountain bighorn sheep The population of these rare alpine sheep is in decline The lambs are dying in unprecedented numbers Hutto's job is to find out why For months at a time he follows the bighorn herds meets mountain lions and bears weathers injury and storms and beautifully observes the incredible splendor of the Rocky Mountains Hutto has a deep connection to Wyoming having managed a large cattle ranch in his past He weaves Wyoming's history of the cowboy mountain ecology and the lives of the bighorn sheep into a beautiful flowing narrative Ultimately he discovers that the lambs are dying of cystic fibrosis due to selenium deficiency which is caused by acid rain a grim ecological disaster caused by human pollution Here is a new twist on a cautionary tale and a new voice eloquently expressing the urgency that we mend our ways

Treatise on Geophysics, Volume 6 Anthony B Watts, 2010-05-13 Treatise on Geophysics Crust and Lithosphere Dynamics Volume 6 provides a comprehensive review of the state of knowledge on crust and lithosphere dynamics which is defined as the study of how the outermost layers of the Earth respond to loads that are emplaced on within and below it and its implications for plate mechanics and mantle flow The book begins with a chapter on plate kinematics which shows how new observations and methodologies have improved the resolution of relative and absolute plate motions This is followed by studies of plate mechanics focusing on the long term rheology of the plates and response of the plates to both relatively short term and long term loads The book also includes chapters that examine the evidence from surface heat flow borehole breakouts and magma models for the thermal and mechanical structure of the lithosphere the deformation of the lithosphere in extensional and compressional settings The final two chapters deal with the structural styles of faulting in the shallow brittle part of the lithosphere the brittle ductile transition and the shear zone in the ductile part of the lithosphere and how developments in plate mechanics have impacted our understanding of geological processes Self contained volume starts with an overview of the subject then explores each topic with in depth detail Extensive reference lists and cross references with other volumes to facilitate further research Full color figures and tables support the text and aid in understanding Content suited for both the expert and non expert

Earth Paleoenvironments: Records Preserved in Mid- and Low-Latitude Glaciers L. DeWayne Cecil, Jaromy R. Green, Lonnie G. Thompson, 2006-04-11 Glaciers provide an unparalleled tool for studying global environmental change This book is the first of its kind concentrating on the

paleoenvironmental record archived in mid and low latitude glaciers By concentrating mainly on the last 500 years of these records we can now see that laws enacted to protect our environment in Europe and North America are providing positive results Documenting global mid and low latitude paleoenvironmental records in glaciers this volume forms a timely and essential complement to the wealth of literature on polar and Greenland ice sheet records This text is directed towards undergraduate and graduate university audiences and forms an ideal supplement in courses dealing with climate and global environmental change glaciology and natural resources management It is also suitable in helping teach application of innovative analytical and interpretive methods and would be an excellent example of the rapidly emerging discipline of
