Human Emotions and the Origins of Bioethics Susi

Ferrarello, 2020-12-06 This book provides a unique phenomenological dialogue between psychology and philosophy on the origin of bioethics that shows the importance of bringing emotions into bioethical discourse. Divided into two parts, the book begins by defining bioethics and explaining the importance of emotions in making us human, allowing us to consider life holistically. Ferrarello argues that emotions and bioethics are better served when they are combined and that dismissing emotions as nothing more than a nuisance to our rationality has created a society that does not fit our human nature. Chapters explore how ethics relate to intimate life and how ethical agents determine themselves within their surrounding world uniquely and interrogatively using bioethics to consider not only medical dilemmas but also issues concerning environmental and individual well-being. By addressing personal, interpersonal, and societal problems as dynamically interconnected in bioethical problems, she helps us to renew our sense of responsibility toward a good quality of life. This interdisciplinary book is invaluable reading for students of health science, psychology, and philosophy, as well as for those interested in the link between emotions and bioethical discourse from both a psychological and philosophical perspective.

Black Representation in the Science Curriculum

Catherine L. Quinlan, 2024-08-02

This book sheds new light on the importance of Black representation in the US science curriculum from a social, cultural, cognitive, and scientific perspective. Weaving together content, new methodologies, and science education pedagogies, it opens up new space for the meaningful inclusion of the science capital and cultural capital of Black people in the US science curricula. Drawing on ethnographic interviews with African American Gullah Geechee and research outcomes from qualitative and quantitative research and curriculum development, it brings home the importance of attending to a sense of belonging in the K-12 science curricula toward lasting equity and inclusion. The author uses applied cognitive psychology theories as frameworks to show how perceptions about the perceived value of Black representation as a way of knowing is influenced by identity, culture, and social schemas. Incorporating new methodologies and approaches focused on inclusion and belonging, it will appeal to scholars, researchers, upper-level and postgraduate students with interest in STEM education, race, and ethnicity in education, equity, and research methods in education.

The Landscape of Qualitative Research Norman K. Denzin, 2008

The Landscape of Qualitative Research, Third Edition, attempts to put the field of qualitative research in context. Part II isolates what we regard as the major historical and contemporary paradigms now structuring and influencing qualitative research in the human disciplines. The chapters move from competing paradigms (positivist, postpositivist, constructivist, critical theory) to specific interpretive perspectives (feminisms, racialized discourses, cultural studies, sexualities, and queer theory). Part III considers the future of qualitative research. This text is designed for graduate students taking classes in social research methods and qualitative methods, as well as researchers throughout the social
