The European Energy Challenge East And West Duke Press Policy Studies:

The European Energy Challenge George Walter Hoffman, Leslie Dienes, 1985 By examining all of Europe in a single study an eminent geographer and expert on European development makes in this volume a unique contribution to the understanding of the changing energy relations of the European countries east and west The book examines the problem of establishing a reliable energy supply base in western Europe through structural changes and alternate and substitute energy sources The volume also evaluates western European security problems arising from present and future reliance on Soviet energy and relates this to North Sea supplies of gas and oil indigenous and import supplies and nuclear power generation

Energy Abstracts for Policy Analysis ,1985-07 **Dynamic International Oil Markets** C. van der Linde, 2013-03-14 Writing this book would have been impossible without the help of certain institutions and persons For a gas producing and oil processing country like the Netherlands there was surprisingly very little publicly available research material Public libraries collections contained with a certain degree of inconsistency little of the more specialised sources I would therefore like to express my gratitude towards Royal Dutch Shell and especially the library staff in The Hague for allowing me to use the company's library thanking them for their assistance in finding and supplying the required data I am also grateful for the financial assistance of the Nederlandse organisatie voor wetenschappelijk onderzoek NWO and the Faculty of Law of the University of Leiden They provided the financial means to work a crucial month in the very well equipped library of the Oxford Institute for Energy Studies I am indebted to the staff of the Oxford Institute for Energy Studies and particularly to Robert Mabro and Jeremy Turk for their comments support and friendship After I spent a month in the Institute in July 1989 I was able to return for two five month periods in 1990 and 1991 For both periods the Oxford Institute and the Leiden Law Faculty provided me with the necessary means I would also like to express special gratitude to some people who have been a great support and supplied me with valuable comments at various stages of the study **Sectors of Mutual Benefit in**

U.S.-Soviet Relations Nish Jamgotch, 1985 A distinguished panel of analysts examines particular areas of U S Soviet cooperation crisis communications trade science agriculture environment protection space and medicine The authors analyze agreements that the United States and the Soviet Union have revolved in their mutual interest agreements that all too often are overlooked in an atmosphere clouded by hostility and mutual distrust What they ask has been the history of these agreements Have they succeeded or failed How might they best be sustained and enlarged Without minimizing the enormous dangers of ongoing strategic military competition the contributors attempt to determine which sectors of U S Soviet relations have yielded the most significant mutual benefits They raise questions about where U S policy has gone wrong where it has been effective and how safe we are in forecasting the continuation of those cooperative relationships Managing Britain's Marine and Coastal Environment Jonathan Potts, Hance D. Smith, 2013-02-01 Britain's maritime tradition is well documented The management of its marine and coastal environment is therefore of tantamount importance and offers lessons for other

nations across the world The beginning of the new millennium marks a major long term turning point in the historical development of Britain s maritime interest discernible by continued diversification and intensification in the uses of the sea unprecedented and often adverse environmental impacts engendered by these uses and the beginning of a major effort to establish a comprehensive management system which can deal with both multiple uses and environmental impacts This collection featuring an impressive list of contributors covers themes including maritime history environmental issues public policy tourism technology and resources as well as open sea development and management It is a useful addition for those interested in geography the environment maritime studies and also engineering *The Journal of Energy and Development*, 1986

The Routledge Research Companion to Energy Geographies Stefan Bouzarovski, Martin J Pasqualetti, Vanesa Castán Broto, 2017-07-06 Energy has become a central concern of many strands of geographical inquiry from global climate change to the effects of energy decisions on our lives However many aspects of the black box of relationships at the energy society interface remain unopened especially in terms of the spatial underpinnings of energy production and consumption within nations cities and regions Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world Providing an integrated perspective on the complex interdependencies between energy and geography The Routledge Research Companion to Energy Geographies offers a timely conceptual framework to study the multiple facets of energy geography including security space and place planning environmental science economics and political science Illustrating how a geographic approach towards energy can aid decision making pathways in the domains of social justice and environment this book provides insights that will help move the international community toward greater cooperation stability and sustainability

Energy and the Politics of the North Atlantic George A. Gonzalez, 2013-01-01 Documents how energy resource acquisition has been the driving motivator for European and American international relations **Annual Report** Woodrow Wilson International Center for Scholars, 1980

Beyond the EU Regulatory State Andrea Prontera, 2019-08-16 The EU s growing dependence on natural gas and Russian resources energy security has become a hot discussion topic in academia and in policy circles in Brussels Washington and many European capitals However most of the books on the subject use a very descriptive and or normative approach and very few attempt to theorise EU energy security outside of mainstream conceptualisations of the EU as an international actor This book closes an important gap in the literature and offers a fresh perspective on EU energy studies and it will be an important contribution to the debate on the development of European integration and the EU s role in international relations in the wake of the crisis in EU politics and in light of the EU s increasingly complex external environment Due to its interdisciplinary features the book combines EU studies international affairs political economy and energy studies and the topics covered this book will be of special interest to scholars of the international political economy of energy and to those interested in European politics and EU international relations

Global Energy Dilemmas Mike Bradshaw, 2013-11-20 Today's global energy system faces two major challenges: how to secure the supply of reliable and affordable energy and how to rapidly transform to a low carbon efficient and environmentally harmless energy supply. In this rigorous and illuminating book Michael Bradshaw explores the key aspects of the current global energy dilemma and examines how it is playing out across the major regions and countries of the world. The book begins by charting the development of the current global energy system, exploring its key characteristics with a focus upon energy security and the relationship between energy, economic development and climate change. The next four chapters offer in-depth analyses of four distinct global energy dilemmas in different parts of the world: the challenge of sustaining affluence and decarbonising energy services in the high energy economies of the developed world; the legacies of the centrally planned economy and the consequences of liberalisation in the post-socialist world; growing energy demand and emissions growth associated with the emerging regions; and finally the quest to provide universal access to modern energy services in the developing world in a manner that is both economically and environmentally sustainable. Identifying the governance structures and policy options available to tackle the global energy dilemma, the book concludes that only an integrated approach sensitive to regional issues can reconcile the interests and needs of those facing differing energy challenges across the world today.

The New Geographies of Energy Karl Zimmerer, 2013-09-13 *The New Geographies of Energy: Assessment and Analysis of Critical Landscapes* is a pioneering collection of new geographic scholarship. It examines such vitally important research topics as energy dilemmas of the United States, large trends and patterns of energy consumption including China's role, peak oil, energy poverty, and ethanol and other renewable energy sourcing. The book offers advances in key emerging areas of energy research, each distinguished in the following sections: i) geographic approaches to energy modeling and assessment; ii) fossil fuel landscapes; iii) the landscapes of renewable energy; iv) landscapes of energy consumption; and v) an overview of the new geographies of energy. Karl Zimmerer, *Annals of the Association of American Geographers* and *Energy* issue editor, and an essay on America's oil dependency by Vaclav Smil, renowned energy geographer. In addition, there is a specially commissioned book review. This book was published as a special issue of the *Annals of the Association of American Geographers*.

The Political Economy of World Energy John Garretson Clark, 1991 *The Political Economy of World Energy* is an authoritative and wide-ranging study of the role of energy in the twentieth-century world economy. Expanding on his previous work on U.S. energy policy, John Clark reviews and analyzes political, institutional, social, and economic factors affecting world energy supplies and use from 1900 to 1980. Although oil now commands the major share of the world trade in energy, Clark also examines trade in coal, natural gas, and atomic energy. He explores not only policies and events in key energy-producing nations but also efforts of less developed countries and non-energy-producing nations to become producers or to otherwise profit from or control the processing of raw fuels. Clark describes the constantly changing relationships between such leading industrial nations as the United States, Japan, and members of the European Community.

and such important energy producers as the U S S R Mexico Venezuela and the Persian Gulf states After World War I international trade in coal declined and that in oil and natural gas increased Powerful multinational firms came to dominate the energy industry As the United States Japan and Western Europe became increasingly dependent upon oil imports producer nations attempted to manipulate resources for political gain The oil price hikes of the 1970s plagued national economies forcing some modification of the mix of energy resources and focusing somewhat greater attention on conservation and renewable energy sources Modern energy systems were fundamental to urbanization industrialization and attendant sociopolitical changes throughout this century Although the industrialized societies have not been entirely successful in controlling nuclear power and other new energy technologies they have actively promoted their imperfect energy systems to poorer nations who lack technological expertise Little attention has been devoted by either the capitalist economies or the command economies of the old Soviet bloc to the environmental effects of burning fossil fuels For these and other reasons Clark gives the leading capitalist and command economies low marks in energy management **Subject**

Guide to Books in Print ,1997 **Oil and Gas: Europe's entanglement** Peter R. Odell,2001 This second of two volumes on issues surrounding oil and gas examines a succession of fundamental changes in the European energy economy during the last 40 years Examined are the reasons why imported oil replaced indigenous coal as the primary energy source in the early post World War II period the discovery and exploitation of the North Sea basin s hydrocarbons resources and the evolution of the continent s natural gas markets from the early 1960s when it accounted for less than two percent of total energy used to the current contribution of more than 25 percent and an expected eventual share of 35 percent of Europe s energy supply These powerful and complex dynamics of Europe s energy sector are then put in the context of the broader political and economic structures and policies that have emerged over the last four decades American Book Publishing Record ,1991

Decision making in the EU before and after the Lisbon Treaty Madeleine Hosli,Amie Kreppel,Bēla Plechanovová,Amy Verdun,2017-10-02 Decision making in the European Union before and after the Lisbon Treaty aims to assess what the changes the Treaty of Lisbon envisaged and whether these ambitions have materialised since the Treaty entered into force It offers analyses of the past as well as what might be the future because some provisions will only enter into effect in the years to come To what extent has the current decision making process been able to address the shortcomings and challenges of the past What has been the impact of aspects of the Lisbon Treaty that clarified pre existing norms and structures in some cases formalizing them rather than introducing new changes The authors in this book look at the interaction between formal rules and informal practices seeking to point to the interaction between the two They find that informal practices to date typically still dominate formal rules This book was published as a special issue of West
