Hunt, Juergen R. Gadau, 2017-01-27 Social insects are among the most successful and ecologically important animals on earth The lifestyle of these insects has fascinated humans since prehistoric times These species evolved a caste of workers that in most cases have no progeny Some social insects have worker sub castes that are morphologically specialized for discrete tasks The organization of the social insect colony has been compared to the metazoan body Males in the order Hymenoptera bees ants and wasps are haploid a situation which results in higher relatedness between female siblings Sociality evolved many times within the Hymenoptera perhaps spurred in part by increased relatedness that increases inclusive fitness benefits to workers cooperating to raise their sisters and brothers rather than reproducing themselves But epigenetic processes may also have contributed to the evolution of sociality The Hymenoptera provide opportunities for comparative study of species ranging from solitary to highly social A more ancient clade of social insects the termites infraorder Isoptera provide an opportunity to study alternative mechanisms of caste determination and lifestyles that are aided by an array of endosymbionts This research topic explores the use of genome sequence data and genomic techniques to help us explore how sociality evolved in insects how epigenetic processes enable phenotypic plasticity and the mechanisms behind whether a female will become a queen or a worker      *Philology, Or the Science of Activities Designed for Expression* John Wesley Powell, 1903      The Development of Expressive Behavior Gail Zivin, 2013-09-24 The Development of Expressive Behavior Biology Environment Interactions articulates the aspects of how biology and

environment interact in the development of expressive behavior The book brings together categories in the understanding of expressive behavior and its development The text delves on issues on the degree and breadth of linkage between states and expressive behaviors the theoretical and empirical specification of the referent of an expressive behavior and the methodological choices in studying the phenomenon Developmental psychologists ethologists primatologists and sociologists will find value in this work     The ^AScience of Social Vision Reginald B. Adams Jr.,Nalini Ambady,Ken Nakayama,Shinsuke Shimojo,2010-11-16 The human visual system is particularly attuned to and remarkably efficient at processing social cues We can effectively read others mental and emotional states and make snap judgments about their characters and dispositions simply by watching them Given what is clearly a close relationship between vision and social interaction it has become increasingly clear to social psychologists seeking to better understand the functional and neuroanatomical mechanisms underlying social perception that vision plays a critical role in the development and maintenance of social exchange Likewise vision scientists have come to appreciate the profound impact people as social agents have had on the visual system acknowledging just how important it is to consider the socially adaptive functions that system evolved to perform This book heralds the new field of social vision and showcases the cutting edge and broadly interdisciplinary research that is currently at its forefront Together the perspectives drawn from these various fields offer unique insight into the origin adaptive purpose and cognitive cultural and biological underpinnings of social vision that will help to shape and guide the way we think about and examine social visual perception     **The Psychology of Facial Expression** James A. Russell,José Miguel Fernández-Dols,1997-03-28 It reviews current research and provides guidelines for future exploration of facial expression

The Expression of the Emotions in Man and Animals Charles Darwin,2016-02-22 INTRODUCTION MANY works have been written on Expression but a greater number on Physiognomy that is on the recognition of character through the study of the permanent form of the features With this latter subject I am not here concerned The older treatises 1 which I have consulted have been of little or no service to me The famous Conferences 2 of the painter Le Brun published in 1667 is the best known ancient work and contains some good remarks Another somewhat old essay namely the Discours delivered 1774 1782 by the well known Dutch anatomist Camper 3 can

hardly be considered as having made any marked advance in the subject The following works on the contrary deserve the fullest consideration Sir Charles Bell so illustrious for his discoveries in physiology published in 1806 the first edition and in the third edition of his Anatomy and Philosophy of Expression 4 He may with justice be said not only to have laid the foundations of the subject as a branch of science but to have built up a noble structure His work is in every way deeply interesting it includes graphic descriptions of the various emotions and is admirably illustrated It is generally admitted that his service consists chiefly in having shown the intimate relation which exists between the movements of expression and those of respiration One of the most important points small as it may at first appear is that the muscles round the eyes are involuntarily contracted during violent expiratory efforts in order to protect these delicate organs from the pressure of the blood This fact which has been fully investigated for me with the greatest kindness by Professors Donders of Utrecht throws as we shall hereafter see a flood of light on several of the most important expressions of the human countenance The merits of Sir C Bell s work have been undervalued or quite ignored by several foreign writers but have been fully admitted by some for instance by M Lemoine 5 who with great justice says Le livre de Ch Bell devrait etre medite par quiconque essaye de faire parler le visage de l homme par les philosophes aussi bien que par les artistes car sous une apparence plus legere et sous le pretexte de l esthetique c est un des plus beaux monuments de la science des rapports du physique et du moral
