The Evolution of Insect Life Cycles Fritz Taylor, Richard Karban, 2012-12-06 This book was developed out of a symposium at the XVII International Congress of Entomology held in Hamburg Germany on August 21 1984 This symposium was organized by Drs William Bradshaw and Hugh Dingle who subsequently asked us to edit the proceedings The chapters represent for the most part papers that were read in Hamburg but have been expanded and updated The goal of this volume is to provide a comprehensive view of current research on insect life cycles including field and laboratory studies broad comparisons among species or local populations and intensive studies of single populations as well as theoretical research Of necessity given the magnitude of research now being carried out on insects some important research programs are not included and therein lie the makings of future volumes This volume is divided into three parts The first part Geographical Patterns in Insect Life Cycles explores various applications of a comparative method that has been valuable in investigating the potential for variability in life history parameters and the relation of these parameters to important variables in the environment

The Evolution of Insect Mating Systems David Shuker, Leigh Simmons, 2014-07-31 Insects display a staggering diversity of mating and social behaviours Studying these systems provides insights into a wide range of evolutionary and behavioural questions such as the evolution of sex sexual selection sexual conflict and parental care This edited volume provides an authoritative update of the landmark book in the field The Evolution of Insect Mating Systems Thornhill and Alcock 1983 which had such a huge impact in shaping adaptationist approaches to the study of animal behaviour and influencing the study of the evolution of reproductive behaviour far beyond the taxonomic remit of insects This accessible new volume brings the empirical and conceptual scope of the original book fully up to date incorporating the wealth of new knowledge and research of the last 30 years It explores the evolution of complex forms of sex determination in

insects and the role of sexual selection in shaping the evolution of mating systems Selection arising via male contest competition and female choice both before and after copulation are discussed as are the roles of parasites and pathogens in mediating the strength of sexual selection and the role that parental care plays in successful reproduction The Evolution of Insect Mating Systems is suitable for both graduate students and researchers interested in insect mating systems or behaviour from an evolutionary genetical physiological or ecological perspective Due to its interdisciplinary and concept driven approach it will also be of relevance and use to a broad audience of evolutionary biologists

Planet of the Bugs Scott Richard Shaw, 2014-09-11 This excellent guide to the history of our planet offers a bugs eye view of evolution biodiversity and today's ecological crises The Guardian UK According to entomologist Scott Richard Shaw dinosaurs never ruled the earth and neither do humans The true potentates of our planet are and always have been insects Starting in the shallow oceans of ancient Earth and ending in the far reaches of outer space where insect like aliens may also reign Planet of the Bugs spins a sweeping account of insects evolution from humble arthropod ancestors into the bugs we know today Leaving no stone unturned Shaw explores how evolutionary innovations such as small body size wings metamorphosis and parasitic behavior have enabled insects to disperse widely occupy increasingly narrow niches and survive global catastrophes in their rise to dominance Through bizarre and buggy tales from caddisflies that construct portable houses to parasitic wasp larvae that develop in the blood of host insects he demonstrates how changes in our planet's geology flora and fauna contributed to insects success and also how in return insects came to shape terrestrial ecosystems And in his visits to hyperdiverse rain forests to highlight the current insect extinction crisis Shaw reaffirms how crucial these tiny beings are to planetary health and human survival

The Evolution of Insect Flight Andrei K. Brodsky, 1994 This is the first book on this subject since J W S Pringle's classic Insect flight was published in 1957 Much has been written since on applied and ecological aspects of flight but consideration of the question of the origin of wings and flight has been largely confined to armchair speculation in a scattered literature To make matters worse much of the recent empirical work has only appeared in Russian Brodsky is a leading Russian authority on insect flight a pioneer in the use of empirical aerodynamic techniques to unravel the mechanisms which underlie insect flight and hence its origins By uniting fossil structural and phylogenetic information with

his empirical studies he draws a coherent well substantiated picture of the evolution of insect flight The text is illustrated by numerous fine line drawings

The Evolution of Social Behavior in Insects and Arachnids Jae C. Choe, Bernard J. Crespi, 1997 Social insects and arachnids exhibit complex forms of behavior that involve cooperation in building a nest defending against attackers or rearing offspring This book is a comprehensive up to date guide to sociality and its evolution in a wide range of taxa

Evolution of Insect Migration and Diapause H. Dingle, 2012-12-06 This volume is an outgrowth of a Symposium entitled Evolution of Escape in Space and Time held at the XV International Congress of Entomology in Washington D C USA in August 1976 The choice of topic was prompted by recent advances in evolutionary ecology and the apparent suitability of insect migration and dia pause as appropriate material for evolutionary studies In the event that choice seems amply justified as I hope a perusal of these papers will show These Sympos ium papers hardly cover the topic of the evolution of escape mechanisms exhaustively and I

am sure everyone will have his favorite lacuna Some of the more obvious ones are indicated by Professor Southwood in his Concluding Remarks at the end of the book The purpose of the Symposium however was not complete coverage but rather to indicate the potential inherent in insect migration and diapause for the study of evolutionary problems In that I think we have succeeded reasonably well These papers are expanded and in some cases somewhat altered versions of the papers delivered in Washington This has allowed greater coverage of the topics in question I suggested a format of a general overview of a topic emphasizing the author's own research contributions In general the papers follow this outline although emphases vary Two of the authors Dr Rainey and Dr Lumme were unable to attend the Symposium Dr Rainey's paper was read by Mr Frank Walsh but Dr
