Experience of science : a new perspective for laboratory teaching O. Roger Anderson, 1976 *The Experience of Science* O. Roger Anderson, 1976 **University Science and Mathematics Education in Transition** Ole Skovsmose, Paola Valero, Ole Ravn Christensen, 2008-11-19

More than ever our time is characterised by rapid changes in the organisation and the production of knowledge This movement is deeply rooted in the evolution of the scientific endeavour as well as in the transformation of the political economic and cultural organisation of society In other words the production of scientific knowledge is changing both with regard to the internal development of science and technology and with regard to the function and role science and technology fulfill in society This general social context in which universities and knowledge production are placed has been given different names the informational society the knowledge society the learning society the post industrial society the risk society or even the post modern society A common feature of different characterisations of this historic time is the fact that it is a period in construction Parts of the world not only of the First World but also chunks of the Developing World are involved in these transformations There is a movement from former social political and cultural forms of organisation which impact knowledge production into new forms These forms drive us into forms of organisation that are unknown and that for their very same complexity do not show a clear ending stage Somehow the utopias that guided the ideas of development and progress in the past are not present anymore and therefore the transitions in the knowledge society generate a new uncertain world We find ourselves and our universities to be in a transitional period in time In this context it is difficult to avoid considering seriously the challenges that such a complex and uncertain social configuration poses to scientific knowledge to universities and especially to education in mathematics and science It is clear that the transformation of knowledge outside universities has implied a change in the routes that research in mathematics science and technology has taken in the last decades It is also clear that in different parts of the world these changes have happened at different points in time While universities in the New World the American Continent Africa Asia and Oceania have accommodated their operation to the challenges of the construction in the new world in many European countries universities with a longer existence and tradition have moved more slowly into this time of transformation and have been responding at a less rapid pace to environmental challenges The process of tuning universities together with their forms of knowledge production and their provision of education in science and mathematics with the demands of the informational society has been a complex process as complex as the general transformation undergoing in society Therefore an understanding of the current transitions in science and mathematics education has to consider different dimensions involved in such a change Traditionally educational studies in mathematics and science education have looked at changes in education from within the scientific disciplines and in the closed context of the classroom Although educational change in the very end is implemented in everyday teaching and learning situations other parallel dimensions influencing these situations cannot be

forgotten An understanding of the actual potentialities and limitations of educational transformations are highly dependent on the network of educational cultural administrative and ideological views and practices that permeate and constitute science and mathematics education in universities today This book contributes to understanding some of the multiple aspects and dimensions of the transition of science and mathematics education in the current informational society Such an understanding is necessary for finding possibilities to improve science and mathematics education in universities all around the world Such a broad approach to the transitions happening in these fields has not been addressed yet by existing books in the market

Re-visioning Science Education from Feminist Perspectives ,2010-01-01 Women in science education are placed in a juxtaposition of gender roles and gendered career roles Using auto biography and auto ethnography this book examines the challenges and choices of academic women in science education and how those challenges have changed or remained consistent since women have become a presence in science education The book s contributors span a temporal and spatial continuum and focus on how a variety of issues relate to the paradoxes for academic women in science education Science is characterized as a masculine endeavor while teaching is described as women s true profession Thus female academics involved in science education are positioned in two paradoxes First as teachers they are involved in a feminized profession However within that profession women faculty in science education work in a discipline viewed as a masculine enterprise Further these women work in educational institutions that have higher status and prestige than their sisters in elementary middle or high schools Second female professors are bearded mothers Women who have engaged in science education value rationality and logic and assume authority as participants in academe The use of logic the acceptance of authority and the assumption of power are masculine gender stereotyped characteristics This situation places women in a paradox because others including peers and students expect them to display stereotypic female gender dispositions such as mothering nurturing sacrificing their needs for others and a commitment to the institution The topics include discussing how their engagement with science impacted their career trajectories and re direction from science to science education the relationships of cultural and racial factors on career trajectories and the dialectical relationship between women s private public lives and their agency collective and individual in the academy and its enactment within academic fields The book documents the lives and careers of academic women in science education from the United States Australia the Caribbean United Kingdom and Europe **Science Books & Films** ,1977
