**Vegetative Physiology and Biochemistry** Hugh Davson, 2014-05-12 The Eye Volume 1 Vegetative Physiology and Biochemistry is a compendium of papers that describes the physiology of the eye particularly its gross anatomy and embryology including its intra ocular fluids the intra ocular pressure the vitreous body lens cornea and sclera Several papers review the eyeball the protective apparatus of the eye the structure of the tissue in relation to the intra ocular fluids and the flow of aqueous humor Several methods can be used to measure the intra ocular pressure such as the manometric method and the tonometer Giles 1959 reports that tonometer measurements in the newborn are within the normal adult range One paper notes that in man liquefaction of the vitreous body the clear jelly like structure which fills the space between retina and lens which is caused by dissolution of the fibrous network is never repaired This suggests that new fibers are either not formed or are formed in insufficient amounts Another paper examines the relationship between pressure in the eye vessels and eye tension Investigators and researchers in the fields of physiology psychology ophthalmology and in all branches of ocular physiology will find the compendium very rewarding *The Eye Vol 1 Vegetative Physiology and Biochemistry*, 2000

*Progress of Lens Biochemistry Research Volume in honour of Prof. Dr. med. J. Nordmann* O. Hockwin, 2012-12-06 On August 25 1976 Prof Dr med JEAN NORDMANN Emeritus Professor of Strasbourg University will celebrate his 80th anniversary The task of paying tribute to Professor NORDMANN s many services to ophthalmology in a way worthy of the occasion is so difficult that we decided to concentrate on the focal point of his life s work In this issue scientists engaged in lens research from all over the world offer reports of their latest findings together with their best wishes and felicitations as a birthday gift to the Nestor of lens research They thereby express their gratitude to Professor NORDMANN who with the lifelong indefatigable enthusiasm of a scientist has most successfully pursued the problems of lens metabolism It is our sincerest hope that we may look forward to

many more years in which to take advantage of Professor NORDMANN's superior knowledge. Among the contributions to this festive donation we miss the works of some authors who have always held Professor NORDMANN's special interest. The editor has received several letters of longstanding friends who would have liked to submit a manuscript but had been unable to meet the deadline. Professor NORDMANN may rest assured that they too belong to the great number of congratulators from our field of research. We have been able to make this dedication thanks to Professor HENKES who readily agreed to publish our contributions in *Documenta Ophthalmologica*. Dr Junk publishers have done their utmost to ensure prompt publication.

*The Eye: The visual process* Hugh Davson, 1962      **The Eye Pt IB** Hugh Davson, 2012-12-02

The Eye 3rd Edition Volume 1b Vegetative Physiology and Biochemistry deals with the vegetative physiology and biochemistry of the eye. The book reviews major advances in the anatomy of the eye and its physiological and biochemical aspects, particularly the cornea and sclera, the ordered state of the lens and lens development, growth and regeneration. This edition is organized into three chapters and begins with an overview of the mechanical and optical properties of the cornea and sclera and their relationship to the underlying structure of the tissue. This book shows that in the cornea the maintenance of the tissue structure requires the constant action of a fluid transport system dependent upon metabolic energy. The pathways of corneal nutrition, the sensitive corneal innervation and the growth processes in the cornea and sclera are also discussed, emphasizing the mammalian cornea. The next chapter examines the use of physical and chemical techniques to determine how the ordered state of the lens is maintained and why that state is susceptible to chaotropic attack. Finally, an account of the metabolism of the lens and how cataract forms is given. This book is a valuable resource for students and researchers in fields ranging from ocular science to physiology and biochemistry.

**Deep Anterior Lamellar Keratoplasty: Different Strokes** Vishal Jhanji, Namrata Sharma, Rasik B Vajpayee, 2012-12-15

Deep anterior lamellar keratoplasty (DALK) is the mainstay of treatment for corneal pathologies sparing the endothelium. This lamellar surgery has undergone a revolution in the past decades. Various techniques and their modifications have been described to make it safe and reproducible so that it can be performed not only by experts but also the novice corneal transplant surgeons. This book describes the evolution of DALK, indications, preoperative evaluation, the various methods of performing DALK and the postoperative outcomes. The issues related to procurement of donor corneas for such cases are discussed. The different strokes in DALK include the conventional Mellar and the Big bubble technique and also the newer modifications such as Double bubble technique, cannula assisted DALK, groove and peel technique as well as diamond blade guided DALK. The different types of modifications presented by eminent lamellar corneal transplant surgeons from all over the world in this book are an endeavor to make DALK feasible by all corneal transplant surgeons.
