Hefferan,2020-08-17 Real property in the form of investment ownership and use pervades almost every aspect of daily lives and represents over 40% of Australia s wealth Such assets do not exist in isolation they are dynamic and forever evolving impacted by a range of physical economic demographic legal and other forces Consequently a true appreciation of individual assets and of the property sector as a whole demands an understanding of both the assets themselves and the context and markets in which they exist The sector is complex and on the face of it confusing It is however not without logic and underlying themes and principles This book provides a wider understanding of how the real property sector works It covers topics such as the nature of real property and its functions economic drivers valuation principles legal and tenure parameters property taxation land development and subdivision asset and property management and sustainability all critical components in this complex and critically important sector It provides a wide and balanced perspective for experienced practitioners investors students and anyone involved in property decision making or wishing to secure a deeper understanding of these areas The book integrates research based theory with practical application and first hand insights into a sector that underpins the Australian economy its communities and its sustainability **The Face of the Earth** J. Donald Hughes,2015-05-11 Although the organizing principle of virtually every world history text is development the

editor of this volume maintains that this traditional approach fails to address the issue of sustainability By adopting the ecological process as their major theme the authors show how the process of human interaction with the natural environment unfolded in the past and offer perspective on the ecological crises in our world at the beginning of the 21st century Topics range from broad regional studies that examine important aspects of the global environment that affect nations to a study of the widespread influence of one important individual on his nation and beyond The authors take different approaches but all share the conviction that world history must take ecological process seriously and they all recognize the ways in which the living and non living systems of the earth have influenced the course of human affairs **Nature** Sir Norman Lockyer,1915

A Science of Our Own Peter H. Hoffenberg,2019-10-22 When the Reverend Henry Carmichael opened the Sydney Mechanics School of Arts in 1833 he introduced a bold directive for Australia to advance on the scale of nations it needed to develop a science of its own Prominent scientists in the colonies of New South Wales and Victoria answered this call by participating in popular exhibitions far and near from London s Crystal Place in 1851 to Sydney Melbourne Adelaide and Brisbane during the final decades of the nineteenth century A Science of Our Own explores the influential work of local botanists chemists and geologists William B Clarke Joseph Bosisto Robert Brough Smyth and Ferdinand Mueller who contributed to shaping a distinctive public science in Australia during the nineteenth century It extends beyond the political underpinnings of the development of public science to consider the rich social and cultural context at its core For the Australian colonies as Peter H Hoffenberg argues these exhibitions not only offered a path to progress by promoting both the knowledge and authority of local scientists and public policies they also ultimately redefined the relationship between science and society by representing and appealing to the growing popularity of science at home and abroad **Report of the Annual Meeting** British Association for the Advancement of Science.
