

Rules for accentual patterns:

Accent or stress is the force of voice with which a syllable is pronounced.

Accent denotes the pitch of voice and marks out syllable or syllables that receive greater stress than the rest in a word.

Accent generally falls on the root syllable and not on the suffix or prefix and is known by the mark(^) placed either on vowel sound of the stressed syllable or at the stressed end of it.

Accented syllable are also called heavy or stressed, and the unaccented are known as light or unstressed.

Placing of accent on right syllable is very important in English.

A great deal of correct pronunciation of words of English language depends upon the placing of right accent.

Most Indian speakers of English have defective accents.

That is why their English is not intelligible to foreign speakers.

There are few rules of accent in English as there are few rules of grammar.
