The Faber Atlas:

The Faber Atlas Daniel James Sinclair, 1970-01-01 The Faber atlas, 1970 **Guide to Atlases: World, Regional, National, Thematic** Gerard L. Alexander, 1971 Photographic Atlas of the Moon S. M. Chong, Albert Lim, P. S. Ang, 2002-07-25 The Photographic Atlas of the Moon is a day by day photographic guide to observing the features of the Moon through a small telescope Compiled by three keen amateur astronomers each image was produced using a 40cm telescope and high resolution low speed film Whole Moon images are provided for each day of the 29 day lunar cycle with labelled features and accompanying descriptive text Selected lunar features are shown at high magnification to highlight and clearly illustrate certain regions All lunar features are labelled using current IAU terminology A comprehensive set of appendices detail the phases of the Moon give a chronology of lunar selenography and index all lunar features named in the text This atlas is an invaluable reference guide for amateurs engaging in lunar observations with a small telescope The Faber School Atlas D. J. Sinclair, 1963 *Historical Atlases* Walter Goffart, 2011-04-15 Today we can walk into any well stocked bookstore or library and find an array of historical atlases The first thorough review of the source material Historical Atlases traces how these collections of maps for history maps whose sole purpose was to illustrate some historical moment or scene came into being Beginning in the sixteenth century and continuing down to the late nineteenth Walter Goffart discusses milestones in the origins of historical atlases as well as individual maps illustrating historical events in alternating paired chapters He focuses on maps of the medieval period because the development of maps for history hinged particularly on portrayals of this segment of the postclassical modern past Goffart concludes the book with a detailed catalogue of more than 700 historical maps and atlases produced from 1570 to 1870 Historical Atlases will immediately take its place as the single most important reference on its subject Historians of cartography medievalists and anyone seriously interested in the role of maps in portraying history will find it invaluable **Regional Geography** Roger Minshull, 2017-07-05 There is only one region the surface of the earth on which mankind finds its home Yet although much effort is devoted by geographers towards the study of this diversified environment as a whole it has long seemed necessary by the methods of a special or aeregional geography to study its component parts And although nature abhors lines geographers might appear to adore them so busily do they engage themselves in delimiting on their maps allegedly significant areas called aeregions As a result every student of geography in school college of education and university has been taught read books and attempted to answer questions on regional geography The problem of region in geographic thought how it may be defined how it has developed and how it is applied has been vigorously debated within the discipline In this incisive examination of the types of regions and regional methods treated in modern geography Roger Minshull analyzes in detail the concepts of formal functional and city regions in an attempt to clarify this vexing problem In addition to sizes shapes boundaries and organization the phenomena that usually form the content of regions are delineated in an attempt to define the nature of

regional geography As some regions are seen to be products of geographers minds it is suggested that certain influences especially the methods of mapping the separate topics that form the content of regions have been exaggerated Regionalism and possible alternatives to the regional method are treated and a large section of the book is devoted to the idea of the compage in which the geographer s choice of topics and method of working is much freer than in more traditional approaches *Guide to Atlases Supplement, World, Regional, National, Thematic* Gerard L.
