"In this many-faceted account of the biological sciences as they have developed in America over four centuries, [Doctor Hughes] takes a broad view and tells of the character of science, of individuals in science and of collaborative efforts, of the founding and growth of educational and scientific institutions in the New World, and in his narrative treats of the growth of each of the life sciences. Placing his subjects against the background of all of Western science and in the context of history, he follows individual influences and connections between scientists and between European and American science. He presents a picture of how science was pursued and of the American endeavors particularly, to the present, in which he sees American science as merged into world science, with the implications for the future."
