The Equality Trap:

The Equality Trap Mary Ann Mason, 2018-04-17 Despite the feminist revolution of the past twenty years most women in America are worse off today than at any time in the recent past. Magazines and television programs profile women bank executives, surgeons, and corporate lawyers, but the vast majority of women still work in relatively low-paying jobs. Women work more hours per week in the house and outside than ever before, and a paying job has become a necessity for women in most households. What went wrong? In this provocative book, Mary Ann Mason argues that the women's movement shares some of the blame for this situation. In an original analysis that draws on both social and legal history, she explains how the move away from women's rights toward equal rights has worsened the situation of American working women, especially working mothers. Because women are still the primary care providers for their children, they must take flexible and relatively low-paying jobs to be available in case of a child care problem. With nearly 50 percent of all marriages now ending in divorce, and with a growing trend inspired by the equal rights movement toward no-fault divorce and low or no alimony settlements, divorced mothers frequently find themselves economically devastated. Mary Ann Mason argues that the solution to this predicament is to draw up a new women's rights agenda that will benefit all working women, especially those with children. The equal rights strategy was important in opening the door for the highly publicized super achievers, but it is now time, she says, to improve the lives of the majority of America's working women. This book will be of interest to readers interested in gender studies and particularly issues of equality and feminism. Mary Ann Mason is a professor of law and social welfare at the University of California Berkeley. In addition to her law degree, Mason holds a Ph.D. in American social history.

Mothers on the Job Lise Vogel, 1993 Women's increasing demands for protection and benefits in the workplace, especially with regard to maternity leave, have sparked more than a century of controversy among feminists on how best to serve the needs of working women. This debate continues to divide the feminist community. One side believes women are better served by emphasizing equality with men; pregnancy should be treated like any other disability. The other side wants to recognize difference: special provisions should apply only to pregnant women. Lise Vogel examines the evolution of this debate on pregnant women in the workplace, looking at theoretical as well as practical implications. Vogel begins by assessing the history of the contemporary debate on pregnancy policy in the U.S. Since the middle of the nineteenth century, American women have been torn by the contradictory demands of motherhood and the workplace. Pregnancy was grounds for dismissal from work, and few employers took action to protect pregnant workers. To counter this, early twentieth-century feminists and reformers emphasized female specificity and women's special role. In the 1960s, activists adopted a strategy framed on equality, which moved away from the earlier emphasis on differences. The use of equality strategies to cover the female-specific phenomenon of pregnancy turned out to have problems. Now, women's special needs were denied and ignored. These difficulties, and a series of court cases in the 1980s, triggered debates in the feminist legal community. Vogel looks at the

litigation and debates which pitted advocates of gender neutral strategies against critics who called for female specific policies Vogel argues that in terms of practical benefits women will be served best by a gender neutral approach to pregnancy policy She encourages equality advocates to recognize the inherent diversity of individuals and points out the need to be sensitive to individual factors of race and class as well as sex

Why Politics Fails Ben Ansell, 2023-05-23 A leading political expert explains why systems fail to deliver things we all want democracy equality solidarity security and prosperity and what can be done to create a just equitable and environmentally sane society The dawn of the twenty first century had the promise of a golden age The economy was stable and growing social peace seemed possible and technology appeared benign The past years have awakened us from this complacency We have long known what needs to be done to save the world from climate disaster Why do we continue on the path of self destruction The immense wealth of the United States should make poverty a historical curiosity Why is income inequality growing and the scourge of poverty increasing The vast majority of people around the world want to live in a society with democratic values Why is democracy receding Why is it so hard to get and keep the world we want Ben Ansell one of the world's leading experts on the dilemmas facing modern democracies vividly illustrates how our collective goals democracy equality solidarity security and prosperity are undermined by political traps and why today's political landscape is so tumultuous We want equality but we are loathe to give away our own wealth We want solidarity but we are much better at receiving it than offering it We want security but not if it constrains our freedom And we want to end the climate crisis but we also want a prosperous economy In every case we want a collective goal but are undermined by our individual actions Our aims are altruistic our actions governed by self interest Ansell then comes full circle and through brilliant storytelling and pathbreaking research vividly illustrates how we maneuver through the traps of the messy complicated world of politics that block common sense solutions to the just equitable prosperous and environmentally sane society we all want

Optically Active Charge Traps and Chemical Defects in Semiconducting Nanocrystals Probed by Pulsed Optically Detected Magnetic Resonance Kipp van Schooten, 2013-07-17 Colloidal nanocrystals show much promise as an optoelectronics architecture due to facile control over electronic properties afforded by chemical control of size shape and heterostructure Unfortunately realizing practical devices has been forestalled by the ubiquitous presence of charge trap states which compete with band edge excitons and result in limited device efficiencies

Little is known about the defining characteristics of these traps making engineered strategies for their removal difficult. This thesis outlines pulsed optically detected magnetic resonance as a powerful spectroscopy of the chemical and electronic nature of these deleterious states. Counterintuitive for such heavy atom materials, some trap species possess very long spin coherence lifetimes up to 1.6 s. This quality allows use of the trapped charge's magnetic moment as a local probe of the trap state itself and its local environment. Beyond state characterization, this spectroscopy can demonstrate novel effects in heterostructured nanocrystals such as spatially remote readout of spin information and the coherent control of light harvesting yield.

A Course of Mathematics ... Charles Hutton, 1811 **Exciton Dynamics in Molecular Crystals and Aggregates**, 2006-04-11 Guidelines for Using Bedload Traps in Coarse-bedded Mountain Streams Kristin Bunte, 2007. A bedload trap is a portable sampler designed specifically for collecting gravel and cobble bedload 4 to 180 mm in diameter in wadeable streams. Bedload traps consist of an aluminum frame with a 12 by 8 inch 0.3 by 0.2 m opening to which a 3 to 5 ft 0.9 to 1.65 m long trailing net is attached. Bedload traps are installed on ground plates that are anchored to the stream bottom with metal stakes. Traps do not have to be hand held while sampling and have a large volumetric capacity. This permits collection of bedload over relatively long intervals, typically one hour per sample. In this document we provide detailed guidelines for bedload trap construction and operation. We describe component parts and offer instructions for making the nets and assembling the sampler. Appropriate site selection and preparation are discussed as well as bedload trap installation, use, and maintenance. These guidelines also show how to process the collected bedload samples in the field and how to perform some of the typical calculations used in bedload evaluation.

The International Steam Engineer, 1904 International Steam Engineer, 1904 *Physics of Stochastic Processes* Reinhard Mahnke, Jevgenijs Kaupuzs, Ihor Lubashevsky, 2009-08-04. Based on lectures given by one of the authors with many years of experience in teaching stochastic processes, this textbook is unique in combining basic mathematical and physical theory with numerous simple and sophisticated examples as well as detailed calculations. In addition, applications from different fields are included so as to strengthen the background learned in the first part of the book. With its exercises at the end of each chapter and solutions only available to lecturers, this book will benefit students and researchers at different educational levels. Japan: The Childless Society? Muriel Jolivet, 2005-08-18. Disillusioned by long hours at home alone and by demands from the older generation, Japanese women are marrying later, resulting in a sharp decline in the Japanese birth rate. Muriel Jolivet considers the reasons why Japanese women are finding it increasingly difficult to accept the terms and conditions of motherhood in Japan. *The Childless Society* explores the major factors contributing to maternal malaise in Japan, including the Ten Commandments of the Good Mother, the changing role of the father, education and careers, nostalgia from older

generations Drawing on extensive interviews with Japanese women and translated into English for the first time this innovative study examines the implications behind the declining birth rate and looks towards the future of a country that is in danger of becoming a childless society *Charged Particle Traps* Fouad G. Major, Viorica N. Gheorghe, Günther Werth, 2005-11-10 Over the last quarter of this century revolutionary advances have been made both in kind and in precision in the application of particle traps to the study of the physics of charged particles leading to intensified interest in and wide proliferation of this topic This book is intended as a timely addition to the literature providing a systematic unified treatment of the subject from the point of view of the application of these devices to fundamental atomic and particle physics The technique of using electromagnetic fields to confine and isolate atomic particles in vacuum rather than by material walls of a container was initially conceived by Wolfgang Pauli in the form of a 3D version of the original rf quadrupole mass filter for which he shared the 1989 Nobel Prize in physics 1 whereas H G Dehmelt who also shared the 1989 Nobel Prize 2 saw these devices including the Penning trap as a way of isolating electrons and ions for the purposes of high resolution spectroscopy These two broad areas of application have developed more or less independently each attaining a remarkable degree of sophistication and generating widespread interest and experimental activity **War Department Education Manual** United States Armed Forces Institute, 1941 Irreversibility and Dissipation in Microscopic Systems Edgar Roldán, 2014-06-13 After an insightful introductory part on recent developments in the thermodynamics of small systems the author presents his contribution to a long standing problem namely the connection between irreversibility and dissipation He develops a method based on recent results on fluctuation theorems that is able to estimate dissipation using only information acquired in a single sufficiently long trajectory of a stationary nonequilibrium process This part ends with a remarkable application of the method to the analysis of biological data in this case the fluctuations of a hair bundle The third part studies the energetics of systems that undergo symmetry breaking transitions These theoretical ideas lead to among other things an experimental realization of a Szilard engine using manipulated colloids This work has the potential for important applications ranging from the analysis of biological media to the design of novel artificial nano machines **Modern America: A Documentary History of the Nation Since 1945** Robert H Donaldson, 2014-12-18 This primary source reader assembles key documents and firsthand accounts that are emblematic of American life from the end of World War II to the present Designed to complement a core text for a typical post 1945 U S history course the book offers conciseness and selectivity with balanced coverage of domestic and foreign societal and cultural issues grouped together chronologically The readings afford students compelling and sometimes startling insights into the nation's postwar adaptation to its new position of global power and responsibility wealth and rapid social change on through years of energy and ambition conflict and tragedy to the post Vietnam malaise and the rise of Ronald Reagan the frenzied nineties and the arrival of the new millennium Each chapter includes an introduction that sets the documents in historical context a biographical sketch of a significant person of the time study questions and
