The Evolution Of Differentiation:

The Evolution of Differentiation William S. Bullough, 2013-10-22 The Evolution of Differentiation attempts to sketch the outlines of a framework from what is now known or suspected of the various aspects of differentiation in all types of organisms This book surveys the many aspects of differentiation that are seen today and in particular because of the evident universality of expression of the genetic code to enquire whether any similar universality exists in the methods of gene repression and activation The information reviewed ranges from the chemical control of the genetic mechanisms of unicellular organisms during their various phases of activity to the chemical control of differentiation in multicellular organisms both during embryonic development and in the adult state Finally some consideration is also given to that collapse of differentiation which leads to cancer

The Evolution of Differentiation Eduard Hala, 1967 **The New Evolutionary Sociology** Jonathan Turner, Richard Machalek, 2018-03-09 For decades evolutionary analysis was overlooked or altogether ignored by sociologists Fears and biases persisted nearly a century after Auguste Comte gave the discipline its name as did concerns that its effect would only reduce sociology to another discipline whether biology psychology or economics Worse apprehension that the application of evolutionary theory would encourage heightened perceptions of racism sexism ethnocentrism and reductionism pervaded Turner and Machalek argue instead for a new embrace of biology and evolutionary analysis Sociology from its very beginnings in the early 19th century has always been concerned with the study of evolution particularly the transformation of societies from simple to ever more complex forms By comprehensively reviewing the original ways that sociologists applied evolutionary theory and examining the recent renewal and expansion of these early approaches the authors confront the challenges posed by biology neuroscience and psychology to distinct evolutionary approaches within sociology They emerge with key theoretical and methodological discoveries that demonstrate the critical and compelling case for a dramatically enriched sociology that incorporates all forms of comparative evolutionary analysis to its canon and study of sociocultural phenomena

The Making of Meaning Niklas Luhmann, Michael King, 2022 For the first time this publication makes available to Anglophone readers a sociology of knowledge and culture as developed by the sociologist and social theorist Niklas Luhmann Luhmann is typically described as writing only about systems and as such about a topic that sociologists relegate to the annals of history However this publication reveals that sociology has acted prematurely overlooking the rich and detailed sociology of knowledge and culture that on the one hand uses terms like meaning memory and communication and on the other is very capable of using such terms in the form of a historical analysis that unravels the making and transformation of key concepts and questions that shape the understanding of modern society like individuality and individualism culture and memory and social class This theoretical approach and the empirical material as well as the insights drawn from their combination yield rich and surprising results and show a very different image of Luhmann than that of system theorist As such this volume will be of great interest to scholars in the field of social theory sociology of knowledge and cultural sociology but also conceptual and cultural history as well as culturally

[The Western Medical Reporter](#), 1886 **The Early State in African Perspective**, 2023-07-24

The essays in this volume are the product of an interdisciplinary research seminar on The Early State in Africa conducted during the 1979-1980 academic year at the Hebrew University of Jerusalem. This seminar was one of a series of seminars on comparative civilizations. The participants included historians, sociologists, political scientists, and specialists in comparative religion who shared an interest in the emergence and dynamics of the state in Africa and were concerned with trying to understand its origins and its various manifestations on the continent. **Emerging research organisms in regenerative biology** Igor Schneider, Veronica Hinman, Mathilda Mommersteeg, Stefano Tiozzo, 2023-04-18 **Mechanics of Living Tissues** Cédric Laurent, Claude Verdier, 2024-07-16

Despite their many common features, mechanical behavior, multi-scale structure, evolutionary and living characteristics, etc., the tissues that make up the human body each have specific characteristics linked to their function, which require the development of dedicated experimental, theoretical, and numerical methods. *Mechanics of Living Tissues* brings together the work of a number of experts to provide an overview of the most recent approaches developed to study the biomechanical behavior of these soft tissues in order to understand their structure and apparent behavior. Specific tissues are analyzed across the chapters with the aim of developing solutions that address the clinical problems encountered. Conclusions are then drawn regarding future methods that will improve the current state of knowledge of the behavior of these living tissues in particular with a view to predicting the effect of a pathology or medical procedure on their apparent properties.
