

2 Interface Problems

The normal situation, when a user wants to work with different devices, is generally known. Each device has its own user interface and its own input devices (fig. 1a) [6].

Fig. 1. Standard (a) versus optimal (b) situation when an user works with different devices

For handicapped persons this can mean a new problem: Often it is not possible to use different devices at the same or nearly at the same time. If someone drives a wheelchair he cannot use a communication aid at the same time, if the only movement he is able to perform is needed for driving the wheelchair. Usually a special device or switch is needed additionally to the wheelchair equipment and it is questionable if this could be operated then. Desirable is one user interface for various devices (fig 1b). For example, a communication aid and a powered wheelchair can be operated via the same input devices and the same monitor program.

In practical use of assisting devices, we encountered another interface problem: in the training situation of handicapped persons in our rehabilitation centre. As described above, the choice of input devices and the electronic aids themselves depend on the abilities and needs of the handicapped persons. Every user has his own devices with specific interfaces. This means for a trainer, who e.g. wants to train persons in communicating via symbols, that he has to learn the operation and method of adaption (configuration) of all the communication devices in use. Furthermore, the persons in charge in a residential home for handicapped persons have to learn all services and all the interfaces they have contact to (fig. 2a).

Fig. 2a. Standard situation when a trainer trains several users on devices of the same kind

Additionally, this is not only an inter-individual but also an intra-individual problem: in the case of assisted communication it is possible that someone who begins with a communication aid based on symbols learns more symbols or more complex symbol systems, or he learns to read and to write letters. Seldom the functionality of the communication aid grows as the abilities of its user grows. Usually the disabled person and also his trainer has to change to another
