Abstract

Equality of educational opportunity implies that educational services should be accessible to everyone respectful of their abilities and interests. Using technology in education has been considered to increase access to both knowledge and resources for students. This research was planned to find out the views of principals and teachers regarding the impact of technology on equality of educational opportunity. It was planned as a qualitative study and data was collected through individual interviews with semi-structured open-ended questions. The most prominent suggestions came out as eliminated cultural and economical besides regional and provincial discrepancies, improved physical conditions, and provision of equal rights and privileges for access to education. Furthermore, technology as a way of equal opportunity was thought to increase access to knowledge and resources, increase educational quality and efficiency, and provide flexibility to access knowledge through distance education.

Keywords: Equality, educational opportunity, technology, distance education

Introduction

"All men are created equal" might be a dream of utopia nowadays. History has witnessed religious movements, social movements and revolutions that have been inspired by this idea. These efforts were committed to the idea that all people are expected to have equal human dignity (Reimers, 1999, p.1). Coleman (1967, p.6) states that equality of opportunity has meant several things, and was itself a special concept, in the United States: (1) Providing a free education up to a given level which constituted the principal entry point to the labor force. (2) Providing a common curriculum for all children, regardless of background. (3) Partly by design

¹ The preliminary findings of the study is presented in the 8th International Topical Conference of ecomEDI/Aeurope Network on "e-Competence: Needs and Demands of Innovative Education", May 27-29th, 2013, Antalya, Turkey.
