Is everything Information This is a tantalizing question which emerges in modern physics life sciences astronomy and in today's information and technology driven society In *Powers of Two* expert authors undertake a unique expedition in words and images throughout the world and scales of information The story resembles in a way the classic *Powers of Ten* journeys through space from us to the macro and the micro worlds However by following *Powers of Two* through the world of information a completely different and timely paradigm unfolds Every power of two 1 2 4 8 tells us a different story starting from the creation of the very first bit at the Big Bang and the evolution of life through 50 years of computational science and finally into deep space describing the information in black holes and even in the entire universe and beyond All this to address one question Is our universe made of information In this book we experience the Information Universe in nature and in our society and how information lies at the very foundation of our understanding of the Universe From the Foreword by Robbert Dijkgraaf This book is in many ways a vastly extended version of Shannon's one page blueprint It carries us all the way to the total information content of the Universe And it bears testimony of how widespread the use of data has become in all aspects of life Information is the connective tissue of the modern sciences Undoubtedly future generations will look back at this time so much enthralled by Big Data and quantum computers as beholden to the information metaphor But that is exactly the value of this book With its crisp descriptions and evocative illustrations it brings the reader into the here and now at the very frontier of scientific research including the excitement and promise of all the outstanding questions and future discoveries

Seitter, 2012-12-06 The NATO Advanced Study Institute Cosmological Aspects of X-Ray Clusters of Galaxies took place in Vel en Westphalia Germany from June 6 to June 18 1993 It addressed the fruitful

union of two topics cosmology and X ray clusters both of which carry substantial scientific weight at the beginning of the last decenium of the last century in the second millenium of our era The so far largest X ray All Sky Survey observed by the ROSAT X ray satel lite and ROSAT s deep pointed observations have considerably enlarged the base of X ray astronomy particularly concerning extragalactic sources Cosmology has gained significant impetus from the large optical direct and spectroscopic surveys based on high quality 2 dimensional receivers at large telescopes and powerful scan ning devices harvesting the full information content from the older technique of employing photographic plates Radioastronomy and IR astronomy with IRAS as well as r astronomy with GRO continue and strengthen the role of extragalactic research The rapidly growing computer power in data reduction and data storage facilities support the evolution towards large number statistics A most significant push was given to early cosmology by the needs of physics in trying to unravel the nature of forces which govern our material world The topic of the ASI was chosen because it opens new vistas on this for ever new problem the universe Clusters of galaxies probe large scale matter distributions and the structure of space time

**Astrophysical Jets** A. Ferrari, A. Pacholczyk, 2012-12-06 Attilio Ferrari I want to recall here the basic points I raised at the beginning of the Workshop as the main targets of discussion in the name of the Scientific Committee I attempted to focus the attention of participants on the fact that in many instances we tend to discuss jets in terms of simple physics more or less as one did at the time extragalactic radio sources were discovered for instance we still use equipartition arguments However we must realize that processes in jets leading to their morphologies and energetics clearly depend on complex plasma phenomena Therefore the same standard arguments used to derive characteristic parameters should be questioned some of the speakers were invited to attempt a critical analysis of this point and in fact I believe that this inquisitive attitude was actually present all along the Workshop Observers were asked to choose the parameters to be used in a statistical sample of jets For this they were urged first of all to distinguish between primary and secondary features For instance are knots and wiggles common to all jets Are relativistic flow velocities expected in all active nuclei Are jets denser or lighter than the external medium On the theoretical side I asked to discuss whether or not existing models are in accordance with the limited statistical sample that we have today And which should be the lines of development to be pursued first and to what extent

**The World of Galaxies** Harold G. Corwin, Lucette Bottinelli, 2012-12-06 From 12 April to 14 April 1988 120 of Gerard and Antoinette de Vaucouleurs s friends and colleagues gathered at the Institut d Astrophysique in Paris to celebrate Gerard s 70th birthday and his remarkable career in Astronomy The gathering also honored the memory of Antoinette who died 29 August 1987 after a long illness and her own no less remarkable career This volume collects the 24 invited review papers and the 60 contributed poster papers presented at the meeting Gerard de Vaucouleurs Gerard de Vaucouleurs was born on 25 April 1918 in Paris where he spent his boyhood He became an active amateur astronomer in the early 1930 s making extensive observations of

Mars Jupiter and variable stars including the bright supernova of 1937 in IC 4182 He also began life long interests in astronomical photography and galaxy cataloguing during this period In 1939 he met the director of the Paris transport system and an equally avid amateur astronomer Julien Peridier De Vaucouleurs worked at Peridier s private observatory at Le Houga in southwestern France on and off throughout the next decade His undergraduate work was in mathematics astronomy and experimental physics this combined with his interest in observational astronomy formed his life long empirical approach to science After spending 18 months in the French army early in 1939 41 Gerard returned to the Peridier observatory and then in 1943 to his studies at the Sorbonne where he met Antoinette
