Specifically the NRC was asked to evaluate methods for identifying the best scientific data available to evaluate approaches for developing modeling assumptions to identify authoritative geospatial information that might be used in risk assessments to review approaches for characterizing sublethal indirect and cumulative effects to assess the scientific information available for estimating effects of mixtures and inert ingredients and to consider the use of uncertainty factors to account for gaps in data Assessing Risks to Endangered and Threatened Species from Pesticides which was prepared by the NRC Committee on Ecological Risk Assessment under FIFRA and ESA is the response to that request
