*Islamic Heritage Architecture and Art III* J. Casares,S. Dominguez Amarillo,2020-08-11 Islamic architecture has enriched design with a wide variety of structural shapes including among others unique arches a wide variety of vaults and domes which allow for new forms to be developed The influence that these structural forms have in non Islamic countries was one of the themes of the 3rd International Conference on Islamic Heritage Architecture and Art at which the included papers were presented There is much to learn from past experiences to arrive at solutions which are environmentally sound and sustainable in the long term As conventional energy resources become scarce the Islamic design heritage can offer invaluable lessons on how to deal in an efficient manner with cases of hard and extreme environments Traditional architecture and urban environments in most Islamic countries are now being eroded by overemphasis on a global type of architecture and city planning As a consequence many regions are losing their identity It will become increasingly important for new developments to take light of what the classical Islamic urban designs and architectures have to offer modern society An equally important aspect covered is the analysis of the materials employed and the types of structural elements particularly those unique to Islamic architecture Preserving this heritage requires the development of appropriate conservation techniques in response to the different materials used and the ways structural forms work including under extreme conditions such as earthquakes These papers deal with the design of many types of buildings in Islamic countries including not only the better known public buildings like mosques mausolea citadels and forts but also houses and gardens engineering works such as bridges and dams irrigation systems and many others which have also had a profound impact on society
