Size, Growth, and U.S. Cities Richard P. Appelbaum, 1978 *Urban Growth and City Systems in the United States, 1840-1860* Allan Pred, 1980 In this major new work of urban geography Allan Pred interprets the process by which major cities grew and the entire city system of the United States developed during the antebellum decades The book focuses on the availability and distribution of crucial economic information For as cities developed this information helped determine the new urban areas in which business opportunities could be exploited and productive innovations implemented Pred places this original approach to urbanization in the context of earlier more conventional studies and he supports his view by a wealth of evidence regarding the flow of commodities between major cities He also draws on an analysis of newspaper circulation postal services business travel and telegraph usage Pred s book goes far beyond the usual biographies of individual cities or the specialized studies of urban life It offers a large and fascinating view of the way an entire city system was put together and made to function Indeed by providing the first full account of these two decades of American urbanization Pred has supplied a vital and hitherto missing link in the history of the United States *House Prices: Changing the City World* Pengfei Ni, Marco Kamiya, Haibo Wang, 2019-11-20 This report was jointly launched by the National Academy of Economic Strategy of the Chinese Academy of Social Sciences and UN HABITAT Using the indicator system and objective data the competitiveness of 1 035 global cities was evaluated in detail The report measures the development pattern of global urban competitiveness as a whole and the gap between the relevant parties and the ideal state It has refreshed people s past perceptions of urban rankings and confirmed that the science and technology innovation center cities and central cities of emerging economies have begun to break the inherent global cities and they have entered the ranks of the most urban competitiveness While paying attention to the comparison of competitiveness among cities this report further promotes the perspective to the pattern and trend change of global economic and social development from the perspective of city The followings are new findings First information technology has increasingly become the primary driving force for urban development Second it is the three meridians that divide the global urban population and economic differentiation Third the soft links between cities gradually dominate the global urban system Fourth the formation of new global cities is beginning

Population, the Growth of Metropolitan Districts in the United States: 1900-1940 Warren Simpson Thompson, 1948 *The Growth of Youth Gang Problems in the United States, 1970-98* Walter Benson Miller, 2001 **The Urban Growth Machine** Association of American Geographers. Meeting, 1999-08-12 Two decades after Harvey Molotch s city as a growth machine this book offers a unique critical assessment of his thesis **America's Addiction to Automobiles** Chad Frederick, 2017-09-21 A provocative look at our nation s dependency on the automobile and how its potential impact on urban design will either make or break our health economy and quality of life In this thought provoking work author and urban planning expert Chad Frederick scrutinizes the use of automobiles in cities investigating its role in

exacerbating urban inequalities and thwarting sustainability of modern society Through a comprehensive thoughtful discussion Frederick illustrates how the automobile is fundamentally at odds with the very nature of cities He shows how cars impose huge burdens on our health equity environment local and national economy and quality of life Most of all he shows how automobile dependency has put our entire society at risk The book delves into the monumental role of automobiles in the development of cities after the Great Depression impacting the American identity and affecting the way we produce and manage urban spaces Frederick provides compelling evidence that cities with more diverse modes of transportation are greener healthier more prosperous and even more enjoyable places to live than automobile dependent cities He identifies one institution responsible for our inability to improve our cities the social sciences and examines the root cause of our inability to make progress toward more multi modal cities In conclusion the author offers a radical solution for moving beyond the underlying logic that forces us to create automobile dependent cities

Business Elites and Urban Development Scott Cummings, 1988-01-01 Written in a non technical narrative style this book is an invaluable resource for anyone concerned with current trends in urban development During the Reagan era responsibility for urban planning and development was transferred from government to private business This private sector hegemony over urban development differs markedly from the liberal policy initiatives of the 1960s and 1970s Through a series of case studies this book examines these shifting trends and shows that private sector efforts to revitalize America s central cities have not been uniformly successful The contributors who are among America s leading social scientists utilize neo Marxist urban theory to explain the conditions under which private initiative enhances or erodes downtown redevelopment

Rural and Small Town America Glenn V. Fuguitt, David L. Brown, Calvin L. Beale, 1989-11-21 Important differences persist between rural and urban America despite profound economic changes and the notorious homogenizing influence of the media As Glenn V. Fuguitt, David L. Brown and Calvin L. Beale show in *Rural and Small Town America* the much heralded disappearance of small town life has not come to pass and the nonmetropolitan population still constitutes a significant dimension of our nation s social structure Based on census and other recent survey data this impressive study provides a detailed and comparative picture of rural America The authors find that size of place is a critical demographic factor affecting population composition rural populations are older and more predominantly male than urban populations the distribution of poverty urban poverty tends to be concentrated in neighborhoods rural poverty may extend over large blocks of counties and employment opportunities job quality and income are lower in rural areas though rural occupational patterns are converging with those of urban areas In general rural and small town America still lags behind urban America on many indicators of social well being Pointing out that rural life is no longer synonymous with farming the authors explore variations among nonmetropolitan populations They also trace the impact of major national trends the nonmetropolitan growth spurt of the 1970s and its current reversal for example or changing fertility rates on rural life and on the relationship between metropolitan and

nonmetropolitan communities By describing the special characteristics and needs of rural populations as well as the features they share with urban America this book clearly demonstrates that a more accurate picture of nonmetropolitan life is essential to understanding the larger dynamics of our society A Volume in the Russell Sage Foundation Census Series
