Forgas, 2012-12-06 Most of our interactions with others occur within the framework of recurring social situations and the language choices we make are intimately tied to situational features Although the interdependence between language and social situations has been well recognized at least since G H Mead developed his symbolic interactionist theory psychologists have been reluctant to devote much interest to this domain until recently Yet it is arguable that a detailed understanding of the subtle links between situational features and language use must lie at the heart of any genuinely social psychology This volume contains original contributions from psychologists linguists and philosophers from the United States Canada Europe Israel and Australia who share an interest in the social psychological aspects of language Their work represents one of the first concentrated attempts to chart the possibilities of this exciting field It is perhaps in order to say a few words about the origins of this book The need for a volume integrating research on language and social situations first emerged during the 2nd International Conference of Language and Social Psychology at Bristol University in 1983 at which I was convening a symposium with a similar title at the request of the organizers Peter Robinson and Howard Giles When they first approached me with this idea in 1982 I gladly accepted since my own research on cognitive representations of social episodes seemed eminently relevant to a symposium on language and social situations *Making Sense of Social Situations* Albert J. formal models in the social and behavioural sciences The theory presented here unifies both the representation of the social environment and the equilibrium concept The theory requires that all alternatives that are available to the players be specified in an explicit and detailed manner and this specification is defined as a social situation A situation therefore not only consists of the alternatives currently available to the players but also includes the set of opportunities that might be induced by the players from their current environment The theory requires that all recommended alternatives be both internally and externally stable the recommendation cannot be self defeating and at the same time should account for alternatives that were not recommended In addition to unifying the representation and the solution concept the theory also extends the social environments accommodated by current game theory *Rational Behavior and Bargaining Equilibrium in Games and Social Situations* John C. Harsanyi, 1986 This is a paperback edition of a major contribution to the field first published in hard covers in 1977 The book outlines a general theory of rational behaviour consisting of individual decision theory ethics and game theory as its main branches Decision theory deals with a rational pursuit of individual utility ethics with a rational pursuit of the common interests of society and game theory with an interaction of two or more rational individuals each pursuing his own interests in a rational manner 60 Social Situations and Discussion Starters to Help Teens on the Autism Spectrum Deal with Friendships, Feelings, Conflict and More Lisa A.
