**Understanding Group Behavior: Consensual action by small groups** Erich H. Witte, James H. Davis, 1996 These books grew out of the perception that a number of important conceptual and theoretical advances in research on small group behavior had developed in recent years but were scattered in rather fragmentary fashion across a diverse literature Thus it seemed useful to encourage the formulation of summary accounts A conference was held in Hamburg with the aim of not only encouraging such developments but also encouraging the integration of theoretical approaches where possible These two volumes are the result Current research on small groups falls roughly into two moderately broad categories and this classification is reflected in the two books Volume I addresses theoretical problems associated with the consensual action of task oriented small groups whereas Volume II focuses on interpersonal relations and social processes within such groups The two volumes differ somewhat in that the conceptual work of Volume I tends to address rather strictly defined problems of consensual action some approaches tending to the axiomatic whereas the conceptual work described in Volume II is generally less formal and rather general in focus However both volumes represent current conceptual work in small group research and can claim to have achieved the original purpose of up to date conceptual summaries of progress on new theoretical work The Moral Brain Jean Decety, Thalia Wheatley, 2017-09-08 An overview of the latest interdisciplinary research on human morality capturing moral sensibility as a sophisticated integration of cognitive emotional and motivational mechanisms Over the past decade an explosion of empirical research in a variety of fields has allowed us to understand human moral sensibility as a sophisticated integration of cognitive emotional and motivational mechanisms shaped through evolution development and culture Evolutionary biologists have shown that moral cognition evolved to aid cooperation developmental psychologists have demonstrated that the elements that underpin morality are in place much earlier than we thought and social neuroscientists have begun to map brain circuits implicated in moral decision making This volume offers an overview of current research on the moral brain examining the topic from disciplinary perspectives that range from anthropology and neurophilosophy to justice and law The contributors address the evolution of morality considering precursors of human morality in other species as well as uniquely human adaptations They examine motivations for morality exploring the roles of passion extreme sacrifice and cooperation They go on to consider the development of morality from infancy to adolescence findings on neurobiological mechanisms of moral cognition psychopathic immorality and the implications for justice and law of a more biological understanding of

morality These new findings may challenge our intuitions about society and justice but they may also lead to more a humane and flexible legal system Contributors Scott Atran Abigail A Baird Nicolas Baumard Sarah Brosnan Jason M Cowell Molly J Crockett Ricardo de Oliveira Souza Andrew W Delton Mark R Dadds Jean Decety Jeremy Ginges Andrea L Glenn Joshua D Greene J Kiley Hamlin David J Hawes Jillian Jordan Max M Krasnow Ayelet Lahat Jorge Moll Caroline Moul Thomas Nadelhoffer Alexander Peysakhovich Laurent Pr t t Jesse Prinz David G Rand Rheanna J Remmel Emma Roellke Regina A Rini Joshua Rottman Mark Sheskin Thalia Wheatley Liane Young Roland Zahn
