Spotlight Mode Synthetic Aperture Radar:

Spotlight-Mode Synthetic Aperture Radar: A Signal Processing Approach Charles V. J. Jakowatz, Daniel E. Wahl, Paul H. Eichel, Dennis C. Ghiglia, Paul A. Thompson, 2012-12-06 Modern airborne and spaceborne imaging radars known as synthetic aperture radars SARs are capable of producing high quality pictures of the earth's surface while avoiding some of the shortcomings of certain other forms of remote imaging systems. Primarily, radar overcomes the nighttime limitations of optical cameras and the cloud cover limitations of both optical and infrared imagers. In addition, because imaging radars use a form of coherent illumination, they can be used in certain special modes such as interferometry to produce some unique derivative image products that incoherent systems cannot. One such product is a highly accurate digital terrain elevation map (DTM). The most recent (ca 1980) version of imaging radar known as spotlight mode SAR can produce imagery with spatial resolution that begins to approach that of remote optical imagers. For all of these reasons, synthetic aperture radar imaging is rapidly becoming a key technology in the world of modern remote sensing. Much of the basic workings of synthetic aperture radars is rooted in the concepts of signal processing. Starting with that premise, this book explores in depth the fundamental principles upon which the spotlight mode of SAR imaging is constructed, using almost exclusively the language, concepts, and major building blocks of signal processing. *Spotlight Mode Synthetic Aperture Radar: A Signal Processing Approach* is intended for a variety of audiences. Engineers and scientists working in the field of remote sensing but who do not have experience with SAR imaging will find an easy entrance into what can seem at times a very complicated subject. Experienced radar engineers will find that the book describes several modern areas of SAR processing that they might not have explored previously, e.g., interferometric SAR for change detection and terrain elevation mapping or modern non-parametric approaches to SAR autofocus. Senior undergraduates primarily in electrical engineering who have had courses in digital signal and image processing but who have had no exposure to SAR could find the book useful in a one semester course as a reference. *An Analysis of Keystone Format Spotlight Mode Synthetic Aperture Radar* Orhan Arikan, 1988 **Enhanced Signal Processing Techniques For Spotlight Mode Synthetic Aperture Radar And Other Inverse Reconstruction Problems** Jordan Isaac Mann, 1992 *Design Technology of Synthetic Aperture Radar* Jiaguo Lu, 2019-08-26 An authoritative work on Synthetic Aperture Radar system engineering with key focus on high resolution imaging, moving target indication, and system engineering technology. Synthetic Aperture Radar (SAR) is a powerful microwave remote sensing technique that is used to create high resolution two or three dimensional representations of objects such as landscapes independent of weather conditions and sunlight illumination. SAR technology is a multidisciplinary field that involves microwave technology, antenna technology, signal processing, and image information processing. The use of SAR technology continues to grow at a rapid pace in a variety of applications such as high resolution wide-swath observation, multi-azimuth information acquisition, high temporal information acquisition, 3-D terrain mapping, and image quality improvement. Design

Technology of Synthetic Aperture Radar provides detailed coverage of the fundamental concepts theories technology and design of SAR systems and sub systems Supported by the author s over two decades of research and practice experience in the field this in depth volume systematically describes SAR design and presents the latest research developments Providing examination of all topics relevant to SAR from radar and antenna system design to receiver technology and signal and image information processing this comprehensive resource Provides wide ranging up to date examination of all major topics related to SAR science systems and software Includes guidelines to conduct grounding system designs and analysis Offers coverage of all SAR algorithm classes and detailed SAR algorithms suitable for enabling software implementations Surveys SAR and computed imaging literature of the last sixty years Emphasizes high resolution imaging moving target indication and system engineering Design Technology of Synthetic Aperture Radar is indispensable for graduate students majoring in SAR system design microwave antenna signal and information processing as well as engineers and technicians involved in SAR system techniques

Analysis of Data Collection Processes in Spotlight-mode Synthetic Aperture Radar and Magnetic Resonance Imaging Daniel Mikhail,2016 Synthetic Aperture Radar SAR is a radar imaging technique that is used to collect data about targets These targets are typically landscapes buildings and other planets Since SAR can operate in any weather condition and during any time of day it is a useful tool for military and scientific purposes To collect the data a radar is placed on one side of an aircraft while the aircraft hovers over the desired target Spotlight mode SAR an operation mode of SAR is capable of producing high resolution images of targets as this method focuses only at one area of the target at a time Magnetic Resonance Imaging MRI on the other hand is a popular medical imaging technique MRI acquires data to produce images of a body s organs tissues and skeletal system The interactions between applied magnetic fields and nuclear spins are used to reconstruct images of a body s internal organs and tissues This thesis project focuses on the analysis of the data acquisition processes that take place in spotlight mode SAR and MRI
