Suicide Gene Therapy:

Suicide Gene Therapy Caroline J. Springer,2008-02-01 Gene therapy has expanded rapidly over the last decade The number of clinical trials reported by 2001 included 532 protocols and 3436 patients Phase I trials predominate with 359 trials of 1774 patients versus Phase II 57 trials with 507 patients and Phase III 3 trials of 251 patients The disease overwhelmingly targeted by gene therapy is cancer involving 331 trials with 2361 patients Despite the somewhat disappointing results of clinical trials to date gene therapy offers tremendous promise for the future of cancer therapy The area of gene therapy is vast and both malignant and nonmalignant cells can be targeted **Suicide Gene Therapy Methods and Reviews** covers gene therapy that targets malignant cells in a treatment that has become known as suicide gene therapy Basically this approach uses the transduction of cancer cells with a gene for a foreign enzyme that when expressed is able to activate a nontoxic prodrug into a highly cytotoxic drug able to kill the cancer cell population This is a major area in cancer gene therapy in 2001 this technique was represented by 52 clinical protocols with a total of 567 patients Additional trials used multiple gene therapy protocols that also involved suicide gene therapy 83 with 497 patients indicating that the interest in this area is considerable **Suicide Gene Therapy Methods and Reviews** aims to cover comprehensively both in theoretical and practical terms the rapidly evolving area of suicide gene therapy for cancer **Suicide Gene Therapy** Nejat Düzgüneş,2018-12-12 This detailed volume explores the methods used for most of the recent approaches to suicide gene therapy of cancer which exploits promoters that are specific to cancer cells thereby ensuring or greatly increasing the likelihood that the therapeutic gene is expressed only in cancer cells The book also contains chapters describing methods to improve the safety of cell therapy and techniques utilizing bone marrow mesenchymal cells Written for the highly successful **Methods in Molecular Biology** series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and practical **Suicide Gene Therapy Methods and Protocols** serves as an ideal guide for researchers expanding upon our knowledge and application of this vital form of cancer therapy **Applications of Suicide Gene Therapy for the Treatment of Colorectal Metastases** Ian Michael Pope,2002 **Therapeutic Applications Of Suicide Gene Therapy** Scott M. S. Freeman,Aizen J. Marrogi,2002-04-01 **Targets in Gene Therapy** Yongping You,2011-08-23 This book aims at providing an up to date report to cover key aspects of existing problems in the emerging field of targets in gene therapy With the contributions in various disciplines of gene therapy the book brings together major approaches Target Strategy in Gene Therapy Gene Therapy of Cancer and Gene Therapy of Other Diseases This source enables clinicians and researchers to select and effectively utilize new translational approaches in gene therapy and analyze the developments in target strategy in gene therapy **Shortcomings and Prospects for Improvements in Suicide Gene Therapy of Cancer** Robert Glovsky,1996 **Suicide Gene Therapy and Regulatory T Cells** Seonaid M. Control LaMont Cannon, 2010 Based on the recent dynamic gene therapy proposed by Martinez Quintanilla et al we have developed a set of ordinary differential equations to model the dynamics of various cancerous cells during tumor growth and treatment We then exploited the dependence of certain parameters within the system during therapy to devise an optimal control method for treatment Employing the use of an optimal controller allows us to analyze the best possible outcome of the treatment under several conditions In this thesis we will apply an optimal controller to the system under various conditions taking specific note of the total tumor burden as a result of the treatment and total treatment time We will then prove that an optimal control approach is very helpful and may even be necessary for successful implementation of this novel cancer therapy

Manufacturing of Gene Therapeutics G. Subramanian, 2012-12-06 Advances in molecular biology and recombinant DNA technology have accelerated progress in many fields of life science research including gene therapy A large number of genetic engineering approaches and methods are readily available for gene cloning and therapeutic vector construction Significant progress is being made in genomic DNA sequencing gene expression gene delivery and cloning Thus gene therapy has already shown that it holds great promise for the treatment of many diseases and disorders In general it involves the delivery of recombinant genes or transgenes into somatic cells to replace proteins with a genetic defect or to transfer with the pathological process of an illness The viral and non viral delivery systems may hold the potential for future non invasive cost effective oral therapy of genetically based disorders Recent years have seen considerable progress in the discovery and early clinical development of a variety of gene therapeutic products The availability validation and implementation of gene therapeutic products has also enabled success in testing and evaluation New challenges will need to be overcome to ensure that products will also be successful in later clinical development and ultimately for marketing authorisation These new challenges will include improvements in delivery systems better control of in vivo targeting increased level transduction and duration of expression of the gene and manufacturing process efficiencies that enable reduction in production costs Perhaps profound understanding of regulated gene design may result in innovative bioproducts exhibiting safety and efficacy profiles that are significantly superior to those achieved by the use of naturally occurring genes This procedure may contribute considerably to fulfilling standards set by regulatory authorities This book provides an overview of the current advances in the field of gene therapy and the methods that are being successfully applied in the manufacture of gene therapeutic products and hopefully will stimulate further progress and advancement in this field to meet the ever increasing demands

Prodrugs and Targeted Delivery Jarkko Rautio, 2011-01-11 This topical reference and handbook addresses the chemistry pharmacology toxicology and the patentability of prodrugs perfectly mirroring the integrated approach prevalent in today's drug design It summarizes current experiences and strategies for the rational design of prodrugs beginning at the early stages of the development process as well as discussing organ and site selective prodrugs Every company employing medicinal chemists will be interested in this practice oriented overview of a key strategy

Cytokines and Colony Stimulating Factors Dieter Körholz, Wieland Kiess, 2008-02-04 The immune system is a complex network in which different cell types and soluble factors interact to efficiently eliminate various kinds of microorganisms as well as aberrant cell clones The roots of immunologic investigations reach far into the past In 430 BC Thucydides reported that survivors of the plague did not present a second time with similar symptoms The first report of a successful immu therapy was made by Edward Jenner in 1798 who found a protective effect of cowpox vaccination against human pox Since then much knowledge has been accumulated today investigations of the molecular mechanisms of immune regulation are of central research interest The novel insights into gene polymorphisms and gene regulation gathered from this work has improved our knowledge of individual immune reactions and risk factors in overcoming infections Strategies to use the immune system for cancer treatment have been propelled by the discovery of divergent immunoregulatory cytokines and the introduction of new gene therapy strategies to modify immune responses Recently the discovery of various dendritic cells has focused attention on these cell types as central elements of the immune response and to the possibility of dendritic cell expansion maturation and consecutive stimulation with immuno active tumor specific peptides Similarly methods for ex vivo expansion of various stem cell derived cell types have led to an improved therapeutic management of various benign and malignant diseases
