

Raymond Bentley, *Technological Change in the German Democratic Republic*, Boulder/London, Westview, 1984.

A nice joke has it that the most efficient people in Europe are the East Germans; they even made socialism work. Now here is the book to tell you to what extent this is true and why. On a more sober note, Bentley has done a very detailed and comprehensive research job on facts and figures to show how technical change happens in DDR, how it does or (does not) contribute to economic success, and how DDR compares with its counterpart capitalist economy in Germany. Unfortunately, Bentley has not had the chance to research in East Germany, but had access to a very large number of documents and publications in Ulm in the Federal Republic. These have been compiled and analysed with a good knowledge of the language and the overall social and economic environment.

The interpretation seems sound although not revolutionary, but then it probably does not have to be. DDR appears to make a good try, and it does make a number of things work better than other socialist countries, but it still has many flaws in the system, notably in translating basic innovations and research and development in a more academic context, into selling products. This is shown with greater attention to specifics and a sure sense of what is going on. Probably this is the definitive work on technical change within the DDR economy and society, in the English language.

Ian Mackintosh, *Sunrise Europe: The Dynamics of Information Technology*, Basil Blackwell Ltd., Oxford, 1986, pp. 286, £17.50, hardback.

Users of Information Technology will need no introduction to the author of this fascinating and rather disturbing book. When the Mackintosh Report on the future for electronic mail technology was published in 1978 few managers had seen even a word-processor and computers were mysterious engines driven by noisy Teletype terminals and guarded by mystics. In less than 10 years the world has seen a revolution in information technology, not just in the technology itself but also in its impact on business and on society. Ten years ago we entertained great hopes for the success of European cooperation, how has information technology fared in Europe?

Mackintosh describes in remorseless detail how the initiative in this key

Engines Of Prosperity: Templates For The Information Age John D Trudel, Gerardo R Ungson, 1998-09-28 The world of business is in the throes of a new revolution It is paradoxically both the best and worst of times Opportunity abounds but the economic societal and technological foundations of the Machine Age are crumbling Confounded by chaos and heavily pressured for results most Western managers have no better ideas for how to compete than to endlessly copy each other cut costs and buy up rivals Downsizing is epidemic and decline common Clearly the world is going through a major transition When this transformation is completed it will look very different This upheaval will change everything but the focus and maximum stress point is economic In the future world power and national prosperity will increasingly depend on the ability to compete in high value

added product market areas The winners will develop new societal models for business economics government and education This current and authoritative book is the joint product of an academician and a business practitioner both of whom share a deep concern about the inadequacy of current models and practices It examines the new environment and explores the underlying drivers the Engines of Prosperity that set the new rules of competitive rivalry It provides timely advice for managers on how to operate in a world characterized by Information Age technology rapid change deepening global linkages increasing returns to scale and the continuous unbundling of value chains Historical Information Science Lawrence J. McCrank, 2001 Here is an extensive review and bibliographic essay backed by 5 000 citations about developments in information technology since the advent of personal computing and the convergence of the disciplines Its focus is on the access preservation and analysis of historical information primarily in electronic form and the relationships between new methodology and instructional media technique and research trends in library special collections digital libraries electronic and data archives and museums *The Changing Technological Scene* International Industrial and Licensing Consultants, United Nations Industrial Development Organization, 1991 **Science & Public Policy**, 1995 **Trading Blocs** Kerry A.
