Thinking-Driven Testing Adam Roman, 2018-03-20 This book presents a new paradigm of software testing by

emphasizing the role of critical thinking system thinking and rationality as the most important skills for the tester It thus approaches software testing from a different perspective than in past literature as the vast majority of books describe testing in the context of specific tools automation documentation particular test design techniques or test management In addition the book proposes a novel meta approach for designing effective test strategies which is based on recent advances in psychology economics system sciences and logic Chapter 1 starts by introducing the fundamental ideas underlying software testing Chapter 2 then describes meta strategies in software testing i e general approaches that can be adapted to many different situations that a software tester encounters Next Chapter 3 presents the concept of Thinking Driven Testing TDT This approach utilizes the concepts discussed in the two previous chapters and introduces the main ideas that underlie a reasonable and optimal approach to software testing Chapter 4 builds on this basis and proposes a specific approach to testing called TQED that makes it possible to increase creativity in the context of delivering effective optimal test ideas Chapter 5 provides an overview of different types of testing techniques in order to understand the fundamental concepts of test design while Chapter 6 details various pitfalls a tester may encounter and that can originate from a wide range of testing process areas Lastly Chapter 7 puts all this into practice as it contains several exercises that will help testers develop a number of crucial skills logical thinking and reasoning thinking out of the box creativity counting and estimating and analytical thinking By promoting critical rational and creative thinking this book invites readers to re examine common assumptions regarding software testing and shows them how to become professional testers who bring added value to their company
