**From the Athenian Tetradrachm to the Euro** Professor Gabriel Tortella, Professor G rassimos Notaras, Professor Philip L Cottrell, 2013-06-28 With the introduction of the euro much recent attention has been focused on the role of currencies and their national and international significance Whilst much has been made of the euro s achievements in harmonising Europe s financial dealings it is often forgotten that it is by no means the first pan national currency to enter circulation Indeed as the various contributions to this volume make plain the euro can in many ways be regarded as a step back to the future that is a further international currency in a long historical tradition that includes the Athenian tetradrachm the Spanish peso and the French franc Covering a timespan of some two and a half millennia the contributions within this volume fall within four broad chronological sections the first comprising three contributions that consider aspects of the European experience from classical antiquity until the high middle ages The discussion then leaps forward chronologically to the modern age given a focus by three contributions devoted to nineteenth century European developments These in turn are set within a wider spatial perspective by two essays that review first the classical gold standard primarily in terms of peripheral economies experience and second the Bretton Woods system Fourth and lastly the euro s origins and birth are explored in three further contributions By taking such a long term view of supra national currencies this volume provides a unique perspective not only to the introduction and development of the euro and its predecessors but also on the broader question of the relationship between trade and common currencies

**From the Athenian Tetradrachm to the Euro** P. L. Cottrell, Gerasimos Notaras, Gabriel Tortella

**Laboratories of Art** Sven Dupré,2014-04-25 This book explores the interconnections and differentiations between artisanal workshops and alchemical laboratories and between the arts and alchemy from Antiquity to the eighteenth century In particular it scrutinizes epistemic exchanges between producers of the arts and alchemists In the fifteenth and sixteenth centuries the term laboratorum uniquely referred to workplaces in which chemical operations were performed smelting combustion distillation dissolution and precipitation Artisanal workshops equipped with furnaces and fire in which chemical operations were performed were also known as laboratories Transmutational alchemy the transmutation of all base metals into more noble ones especially gold was only one aspect of alchemy in the early modern period The practice of alchemy was also about the chemical production of things medicines porcelain dyes and other products as well as precious metals and about the knowledge of how to produce them This book uses examples such as the Uffizi to discuss how Renaissance courts established spaces where artisanal workshops and laboratories were brought together thus facilitating the circulation of materials people and knowledge between the worlds of craft today s decorative arts and alchemy Artisans became involved in alchemical pursuits beyond a shared material culture and some crafts relied on chemical expertise offered by scholars trained as alchemists Above all texts and books products and symbols of scholarly culture played an increasingly important role in artisanal workshops In these workplaces a sort of hybrid figure was at work With one foot in artisanal and the other in scholarly culture this hybrid practitioner is impossible to categorize in the mutually exclusive categories of scholar and craftsman By the seventeenth century the expertise of some glassmakers silver and goldsmiths and producers of porcelain was just as based in the worlds of alchemical and bookish learning as it was grounded in hands on work in the laboratory This book suggests that this shift in workshop culture facilitated the epistemic exchanges between alchemists and producers of the decorative arts
