FOR SELECTIVE AND INDEPENDENT SCHOOLS  
AND FOR SCHOLARSHIP EXAMINATIONS

**Years 5–8 + Adults**

**The Original Australian Basic Skills Series with Removable Answers**

## Test 23

The largest of the mammals are the various whales which ply the oceans. Near their tails, small bones remain to witness the existence of hind legs in former times. We know that those huge forelimbs, or paddles, had five toes - used for walking on land. The mighty tail is both rudder and propeller in one, horizontal, not vertical as a fish's tail. There is the strength of many horses in its stroke. It brings the whale to the surface like a volcanic island; it drives it down again like a colossal bomb. At one moment the whale is breathing at the surface at normal atmospheric pressure and the next it is over a thousand metres deep, bearing a pressure of about 450 tonnes for every metre of its body.

### 1. The small bones near the tail of a whale show

- a) That a whale was not always so large.
- b) That a whale was once a land creature.
- c) That a whale has much strength in its tail.
- d) That a whale has a tail like a fish.
- e) That a whale is able to swim in deep water.

### 2. What peculiarity has the whalebone whale?

- a) It breathes out air before reaching the surface.
- b) It has an extremely large mouth.
- c) It has a double nostril.
- d) It dines solely on sandlines.
- e) It can dive to great depths.
