The Rambler, 1849 *Beyond Superstructuralism* Richard Harland, 2003-09-02 Moving on from his previous book *Superstructuralism* Richard Harland argues that the focus on single words in the structuralist theory of language is its key weakness and that the next advance beyond post structuralism depends upon replacing word based with syntagm based theories In a lucid way he develops a new syntagmatic theory which shows that the effect of combining words grammatically can transform the very nature of meaning The wide breadth of coverage in the book covers both post Chomskyan linguistics and Derrida and sets up an opposition to analytic and speech act views of language By presenting a systematic critique and counter proposal Harland challenges the very foundation of recent literary and language based theory

1875-1925, Semi-centennial of the Connecticut Agricultural Experiment Station ... Connecticut Agricultural Experiment Station, 1926 A Priori Revisability in Science Boris D. Grozdanoff, 2014-06-19 The most influential rationalist model of scientific knowledge is arguably the one formulated recently by Michael Friedman The central epistemic claim of the model concerns the character of its fundamental principles which are said to be independent from experience Friedman's position faces the modern empiricist challenge he has to explain how the principles could still be a priori if they change under empirical pressure This book provides a contemporary account of the epistemic character of the principles addressing recent work on the a priori in modern analytic epistemology Its main thesis is that at least some principles within natural science are not empirically but a priori revisable A Priori Revisability in Science formulates a general notion of epistemic revisability and extracts two kinds of specific revisabilities the traditional empirical one and the suggested novel a priori revisability It presents the argument that the latter is as vital as the former and even so within natural science To demonstrate this the author analyzes two case studies one from the history of geometry and one from the history of physics and shows that the revisions were a priori The result of this is two fold First a genuine alternative of empirical revisability is developed and not just for traditional a priori domains like mathematics but for the natural sciences as well Second a new mechanism for the dynamics of science is suggested the a priori dynamics at the core of which the scientific knowledge sometimes evolves through non empirical moves Report of the Connecticut Agricultural Experiment Station, New Haven, Conn. for the Year ...
