Building Intelligent Information Systems Software Thomas D. Feigenbaum,2015-12-07 Building Intelligent Information Systems Software shows scientists and engineers how to build applications that model complex information data and knowledge without the need for coding Traditional software development takes time and leads to inflexible complicated applications that almost but don't exactly meet the intended needs Requirements can change sometimes mid development and adapting existing systems can be difficult Individual solutions can be incompatible leading to information silos and inefficiency throughout an organization This

book offers a solution the Information Unit Model an innovative architecture for translating domain knowledge into applications By encapsulating the complexities of computing the Unit Model allows engineers to focus on business or experimental needs Author Tom Feigenbaum inventor of the Unit Modeler demonstrates this innovative software architecture for rapid application design and development His approach promotes repurposing pre existing tools and libraries and collaborating across the cloud to promote information sharing and efficient development practices Each concept is illustrated with examples including file management data management and 3D visualization Turn your domain knowledge into applications without heavy coding Design and develop information systems applications in a fraction of the time of traditional methods Leverage previously built components to jump start new projects Includes access to a trial version of the Information Unit Modeler tool for rapid application development

Computer Supported Education Susan Zvacek, Maria Teresa Restivo, James Uhomoibhi, Markus Helfert, 2016-02-10 This book constitutes the refereed proceedings of the 7th International Conference on Computer Supported Education CSEDU 2015 held in Lisbon Portugal in May 2015 The 34 revised full papers presented together with an invited talk were carefully reviewed and selected from 196 submissions The papers address topics such as information technologies supporting learning learning teaching methodologies and assessment social context and learning environments domain applications and case studies and ubiquitous learning

Advances in Multimodal Interfaces - ICMi 2000 Tieniu Tan, Yuanchun Shi, Wen Gao, 2003-06-29 Multimodal Interfaces represents an emerging interdisciplinary research direction and has become one of the frontiers in Computer Science Multimodal interfaces aim at efficient convenient and natural interaction and communication between computers in their broadest sense and human users They will ultimately enable users to interact with computers using their everyday skills These proceedings include the papers accepted for presentation at the Third International Conference on Multimodal Interfaces ICMi 2000 held in Beijing China on 14-16 October 2000 The papers were selected from 172 contributions submitted worldwide Each paper was allocated for review to three members of the Program Committee which consisted of more than 40 leading researchers in the field Final decisions of 38 oral papers and 48 poster papers were made based on the reviewers comments and the desire for a balance of topics The decision to have a single track conference led to a competitive selection process and it is very likely that some good submissions are not included in this volume The papers collected here cover a wide range of topics such as affective and perceptual computing interfaces for wearable and mobile computing gestures and sign languages face and facial expression analysis multilingual interfaces virtual and augmented reality speech and handwriting multimodal integration and application systems They represent some of the latest progress in multimodal interfaces research

Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal

acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership
