Economic Growth and Development Hendrik Van den Berg, 2012 This textbook covers the full range of topics and issues normally included in a course on economic growth and development Both mainstream economic perspectives as well as the multi paradigmatic inter disciplinary and dynamic evolutionary perspectives from heterodox economics are detailed Economic development is viewed in terms of the long run well being of humanity social stability environmental sustainability and just distribution of economic gains not simply as the growth of GDP Furthermore this textbook explicitly recognizes the complexity of economic development by linking economic activity to our broader social and natural environments The textbook's unique feature is its focus on the natural environment Both the historical effects of economic development on the environment and the environmental constraints on future economic development are thoroughly discussed in two chapters on environmental issues and policies In fact because economic development is defined in terms of economic social and environmental sustainability the natural environment is included in discussions throughout the book The textbook is inter disciplinary knowledge from fields such as sociology psychology political science economic history and ecology is called on to enhance the economic analysis A thorough historical account of the development of the principal paradigms of economic development is also included and the important issues of institutional development and cultural change merit their own chapters Two chapters on technological change holistically focus on production technologies as well as the dynamic performance of entire economic social and ecological systems Also the important relationship between economic development and globalization is presented in three chapters on international trade international finance and investment and immigration from both orthodox and heterodox perspectives

Handbook of Development Economics T. Paul Schultz, John Strauss, 2008-04-07 The field of development economics has evolved since volume 3 of the Handbook of Development Economics was published more than a decade ago Volume 4 takes stock of some of the newer trends and their implications for research in the field and our understanding of economic development The handbook is divided into four sections which reflect these developments of which the first deals with agricultural and rural development Section two is concerned with developments in the theory and evidence regarding public goods and political economy The third section is focused on the behavior of households and individuals regarding various aspects of human capital investments in the face of the various constraints particularly market incentives and public goods The final section contains papers that describe the different methods now available both experimental and non experimental to conduct program evaluations as well as describing papers that implement these methods The authors of the chapters are all experts in the fields they survey and

extend and this volume promises to be an invaluable addition to the Handbooks in Economics series and a useful reference to graduate students researchers and professionals in the field of development economics Economic Growth and Development Sibabrata Das,Alex Mourmouras,Peter C. Rangazas,2015-01-12 Growth theory provides a rich and versatile analytical framework through which fundamental questions about economic development can be examined This book is an introduction to the newer features of growth theory that are particularly useful in examining the issues of economic development Structural transformation in which developing countries transition from traditional production in largely rural areas to modern production in largely urban areas is an important causal force in creating early economic growth and as such is made central in this approach Towards this end the authors augment the Solow model to include endogenous theories of saving fertility human capital institutional arrangements and policy formation creating a single two sector model of structural transformation Based on applied research and practical experiences in macroeconomic development the model in this book presents a more rigorous quantifiable and explicitly dynamic dual economy approach to development Common microeconomic foundations and notation are used throughout with each chapter building on the previous material in a continuous flow With its single model and focus on data and policy analysis this text is intended for beginning graduate students and policy makers interested in economic development **Development Economics** Shahrukh Rafi Khan,2019-10-23 Following the 2007 2009 financial and economic crises there has been an unprecedented demand among economics students for an alternative approach which offers a historical institutional and multidisciplinary treatment of the discipline Economic development lends itself ideally to meet this demand yet most undergraduate textbooks do not reflect this This book will fill this gap presenting all the core material needed to teach development economics in a one semester course while also addressing the need for a new economics and offering flexibility to instructors Rather than taking the typical approach of organizing by topic the book uses theories and debates to guide its structure This will allow students to see different perspectives on key development questions and therefore to understand more fully the contested nature of many key areas of development economics The book can be used as a standalone textbook on development economics or to accompany a more traditional text New Perspectives on Economic Development Fu-Lai Tony Yu,2011-04-27 This book is the first of its kind to use Austrian subjectivism to analyze issues in economic development Unlike scholars in mainstream neoclassical economics who explain economic development by quantitative growth models this book attempts to understand economic progress in human agency perspective In this approach human agency is placed at the centre of economic analysis This book begins with a review of the theories of economic development in the history of Austrian economics with the intention of extending the contributions of major Austrian economists to development economics After pointing out the weaknesses in the orthodox neoclassical approach to economic growth the book then puts forward a subjectivist methodology which integrates the contributions of Max Weber Alfred Schutz and Austrian Economists to interpret economic phenomena

and policies This chapter also serves as a methodological foundation for arguments elaborated in subsequent chapters The rest of the book discusses important issues in economic development namely entrepreneurial process national capabilities innovation trade government transition and catching up strategies for firms in latecomer economies The book ends with concluding remarks and a proposal for a new research agenda in economic development This book is well written free from mathematics and is highly readable It adds new insights not only in economics but also in management politics and social sciences It will be useful to scholars policy makers and students in economic development entrepreneurship theory of the firm management of innovation government policy economic sociology Austrian and evolutionary economics
