Giacomoni,2001-07-31 Sun Protection in Man looks at the beneficial and harmful effects of solar radiation The physiological consequences of sun exposure have been systematically studied starting at the end of the nineteenth century and we now have accumulated knowledge about how Caucasian and Asian skins reacts to solar radiation The chemical effects of solar ultraviolet radiation have been analyzed with particular emphasis during the second half of the twentieth century Research on micro organisms has allowed us to understand the mechanisms of UV induced mutagenesis and photosensitization Studies with laboratory rodents have opened the path to the understanding of UV induced immune depression carcinogenesis photo damage and photo aging The results of these studies have enabled other scientists to investigate the same phenomena in human organs such as the skin and the eye UV radiation damages hair as well The present knowledge in these fields is summarized in some of the chapters of this monograph Mass phenomenon in Europe with the generalization of summer vacations which were a consequence of social reforms introducing the concept of paid vacations This created a need for protection and opened a market for sunscreens This monograph is concerned with sun protection as a whole and is not just another book on sunscreens Nonetheless in these

days of general concern it is important to learn about the efficiency of sunscreens Several authors discuss how to reduce the number of impinging photons and explain why sunscreens seem to offer less protection than expected Guidelines are given on how to use sunscreens in everyday life which are expressed rigorously though clearly for access to the common reader Our knowledge on the relationship between sun and humans is at the early stages of development Industrial and commercial activities are concerned by the development of this knowledge and rules have been and will be promulgated to guarantee efficacy and safety of sun products It is hoped that this monograph will be of interest to the scholar the layman and the legislator

Storm and Cloud Dynamics William R. Cotton, George Bryan, Susan C. van den Heever, 2010-12-21 Storm and Cloud Dynamics focuses on the dynamics of clouds and of precipitating mesoscale meteorological systems Clouds and precipitating mesoscale systems represent some of the most important and scientifically exciting weather systems in the world These are the systems that produce torrential rains severe winds including downburst and tornadoes hail thunder and lightning and major snow storms Forecasting such storms represents a major challenge since they are too small to be adequately resolved by conventional observing networks and numerical prediction models Provides a complete treatment of clouds integrating the analysis of air motions with cloud structure microphysics and precipitation mechanics Describes and explains the basic types of clouds and cloud systems that occur in the atmosphere fog stratus stratocumulus altocumulus altostratus cirrus thunderstorms tornadoes waterspouts orographically induced clouds mesoscale convection complexes hurricanes fronts and extratropical cyclones Summarizes the fundamentals both observational and theoretical of atmospheric dynamics thermodynamics cloud microphysics and radar meteorology allowing each type of cloud to be examined in depth Integrates the latest field observations numerical model simulations and theory Supplies a theoretical treatment suitable for the advanced undergraduate or graduate level as well as post graduate
