Skin Cancer Basic Science Clinical Research And Treatment:

Skin Cancer Claus Garbe, Stefan Schmitz, Constantin E. Orfanos, 1995-01-01 **Skin Cancer: Basic Science, Clinical Research and Treatment** Claus Garbe, Stefan Schmitz, Constantin E. Orfanos, 2012-12-06 In the past two decades considerable interest in skin cancer has developed in the public and scientific communities There may have been several reasons for this The rise in the global incidence of cutaneous cancers New molecular biology techniques resulting in a better understanding of pathogenesis and improved diagnostic procedures The advent of new pathological entities e g the endemic form of Kaposi s sarcoma A constantly increasing range of therapeutic modalities providing even more efficacious treatment and management of skin cancers As N E Fusenig describes in the first chapter of this volume basic research is only beginning to unravel the complex mechanism involved in cellular dedifferentiation and tumor progression Progress is dearly needed especially in dermatology where the rise in the incidence of epithelial tumors has inflated the overall skin cancer incidence The incidence of tumors of the skin exceeds that of all other neoplasias in humans with recreational sun exposure being a suspected primary cause Several studies on the effects of UV radiation have been included at the beginning of this volume Even the role of long wavelength UV UVA has become a focus of research activities The main concern is that the low carcinogenicity of UVA in comparison to UVB may be outweighed and exceeded in its effects by increased UV A exposure e g **Interferons** Carlo Aul, Wolfgang Schneider, 2012-12-06 Interferons were among the first cytokines to be studied clinically in recombinant form in the 1980s beginning a new era of pharmacotherapy in internal medicine Interferons were soon employed in the treatment of tumors and it was shown that those hematopoietic neoplasias which had been difficult to treat with chemotherapy responded well to interferon treatment In the present volume renowned international authors update the importance of interferons in various fields of internal medicine dermatology and urology The book also contains a general introduction into the classification structure and mode of action of interferons Further chapters discuss the range of side effects of these substances and point out possible focuses of further clinical interferon research **Skin Cancer - Past, Present and Future** Gerardo Cazzato, Giuseppe Ingravallo, 2025-02-12 Skin cancer represents a global medical challenge as its prevalence morbidity and mortality constitute a public health problem This book presents the latest findings regarding the diagnosis therapy and prognosis of Non Melanoma Skin Cancer NMSC including Basal Cell Carcinoma focusing on different therapeutic modalities In addition the most up to date findings regarding the epidemiology of SC are provided and an innovative technique for the early diagnosis of melanoma is also presented **Skin Cancer and UV Radiation** Peter Altmeyer, Klaus Hoffmann, Markus Stücker, 2012-12-06 UV radiation is recognized as the major risk factor for skin cancer For the last three decades the incidence and mortality of skin cancer have been increasing steadily in almost all parts of the world Unfortunately there have been very few advances in the management and treatment of skin cancer In comparison to other malignant tumors skin cancer offers the unique opportunity to identify this tumor at an early stage Thus

there is strong interest in preventing death by early diagnosis and prompt treatment The proceedings of the International Congress on Skin Cancer and UV Radiation which was held in Bochum Germany in October 1996 reflect the newest scientific standards in the field of skin cancer The conference in Bochum was a platform for leading scientists from all over the world to discuss the complexity and diversity of UV radiation in its interaction with the skin Starting with basic science like physiology immunology and molecular biochemistry of the skin as influenced by UV radiation the book presents a profound survey into the field of skin cancer by focusing on the latest scientific results in prevention early detection treatment and epidemiology The congress in Bochum in 1996 was organized to provide a starting point for coordinated European strategies against skin cancer with internationally renowned scientists **Journal of the National Cancer Institute** ,1995-05

Dekant,2012-12-06 Cellular transformation and carcinogenesis are considered a multistep process starting with DNA lesions and progressing through loss of cellular growth control and increase in invasive and metastatic properties This book focuses on the demonstration of important steps in carcinogenesis ranging from chemical interaction of carcinogens with cellular DNA in experimental tumors and cell lines to the analysis of selected human tumors Special importance is given to the clarification of mechanisms of DNA lesions caused by chemical carcinogens and UV irradiation Leading scientists describe in review articles the actual state of the art in their specific fields The reader is informed of trends and scientific approaches to the recognition of pathogenetic mechanisms and factors in malignant tumors

Biomedical Index to PHS-supported Research ,1991 **Director's Report and Annual Plan for FY ... , National Cancer Program** National Cancer Institute (U.S.),1983 **National Cancer Program; Director's Report and Annual Plan** National Cancer Institute (U.S.), Research Awards Index ,1989 *Recent Advances In Prostate Cancer: Basic Science Discoveries And Clinical Advances* Donald J Tindall,Peter T Scardino,2011-07-19 This book effectively summarizes our knowledge of recent advances in prostate cancer It focuses on our state of the art understanding of risk factors prevention detection prognosis and treatment of prostate cancer and identifies basic science findings that are being

translated into clinical practice In addition the book singles out key areas of research that have potential for clinical translation Both basic scientists and clinicians will be invited to provide up to date reviews in each area of prostate cancer During the last decade the pace of clinical discovery and the scientific advances in prostate cancer have been very rapid For instance currently there are more than 100 drugs in the pharmaceutical pipeline that have the potential for clinical management of prostate cancer Therefore it has been very difficult for clinicians and basic scientists to keep pace with the field as a whole Recently some of these discoveries are already having an impact on clinical practice For example the discovery of the androgen receptor gene amplification in prostate cancer has led to the development of a super antiandrogen which is being tested in clinical trials Also recent knowledge of androgen synthesis in prostate cancer cells has led to clinical trials with steroid metabolism inhibitors Finally robotic surgery has also dramatically changed clinical practice Thus this important book serves to provide readers with a one stop overview of the field of prostate cancer research and its translation into the clinical arena
