Cardiovascular and Respiratory Systems Jerry J. Batzel, Franz Kappel, Daniel Schneditz, Hien T. Tran, 2007-09-20 Cardiovascular and Respiratory Systems Modeling Analysis and Control uses a principle based modeling approach and analysis of feedback control regulation to elucidate the physiological relationships Models are arranged around specific questions or conditions such as exercise or sleep transition and are generally based on physiological mechanisms rather than on formal descriptions of input output behavior The authors ask open questions relevant to medical and clinical applications and clarify underlying themes of physiological control organization Current problems key issues developing trends and unresolved questions are highlighted Researchers and graduate students in mathematical biology and biomedical engineering will find this book useful It will also appeal to researchers in the physiological and life sciences who are interested in mathematical modeling

The Local Cardiac Renin-Angiotensin Aldosterone System Edward D. Frohlich, Richard N. Re, 2006-01-26 How exciting it is to see a field so

well established as the renin-angiotensin system continues to grow and mature. Originally following the original identification of renin by Tigerstedt and Bergman over 100 years ago, workers in this area spent years attempting to establish its role in experimental and renal hypertension. The early work by Goldblatt in 1934 demonstrated that the placement of a clip around a renal artery was clearly related to the subsequent development of hypertension. However, it wasn't until the simultaneous finding by two different geographically separated teams, Page et al in the United States and Braun-Menéndez et al in Argentina, that the peptide angiotensin was identified. Thus, the rate-limiting enzyme, renin, was released from the kidney and catalyzed a biochemical cascade which was eventually shown to produce the elevated arterial pressure. Subsequently, many workers contributed to the elucidation of the concept and sequence of angiotensin I generation. Thus, the enzyme renin acted upon its protein substrate, produced in the liver, to liberate the decapeptide angiotensin I, which, upon circulating through the pulmonary circulation, finally produced the potent octapeptide angiotensin. Several important subsequent findings demonstrated that angiotensin I promoted the release of the adrenal corticosteroid from that gland, thereby resulting in a larger system, the renin-angiotensin-aldosterone system. Further, this system demonstrated a classical biofeedback, and the circulating octapeptide was shown to have additional biological activities in organs other than heart, vessels, kidney, adrenals, and even brain.

Current Trends in Biomedical Engineering and Bioimages Analysis Józef Korbicz, Roman Maniewski, Krzysztof Patan, Marek Kowal, 2019-08-22. This book gathers 30 papers presented at the 21st PCBBE, which was hosted by the University of Zielona Góra, Poland, and offered a valuable forum for exchanging ideas and presenting the latest developments in all areas of biomedical engineering. Biocybernetics and biomedical engineering are currently considered one of the most promising ways to improve health care and consequently the quality of life. Innovative technical solutions can better meet physicians' needs and stimulate the development of medical diagnostics and therapy. We are currently witnessing a profound change in the role of medicine, which is becoming ubiquitous in everyday life thanks to technological advances. Further, the development of civilization manifests itself in efforts to unlock the secrets of the human body and to mimic biological systems in engineering. The biannual Polish Conference on Biocybernetics and Biomedical Engineering (PCBBE) has been held for nearly four decades and has attracted scientists and professionals in the fields of engineering, medicine, physics, and computer science. Gathering the outcomes of this conference, the book introduces the reader to recent developments and achievements in biocybernetics and biomedical engineering.
