Sugar Confectionery Manufacture:

Sugar Confectionery Manufacture E.B. Jackson, 1995-12-31 Following the great success of the first edition this thoroughly revised and updated volume continues to provide a highly practical and comprehensive review of the sugar confectionery manufacturing industry. The authors who are internationally recognized experts in their fields draw on many years experience in providing a digestible account Divided into sections covering the production and properties of raw materials manufacturing processes and other technical aspects of the subject many of the original chapters have been totally rewritten and reorganized to reflect today s market **The Science of Sugar Confectionery** William P Edwards, 2015-11-09 Confectionery is a topic close to many people s hearts and its manufacture involves some interesting science The confectionery industry is divided into three classes chocolate flour and sugar confectionery It is the background science of this latter category that is covered in The Science of Sugar Confectionery The manufacture of confectionery is not a science based industry as these products have traditionally been created by skilled confectioners working empirically In fact scientific understanding of the production process has only been acquired retroactively Historically however sugar confectionery has had technological synergies with the pharmaceutical industry such as making sugar tablets and applying panned sugar coatings This book gives an introduction to the subject with some basic definitions and commonly used ingredients and then moves on to discuss the chemistry of various types of sugar confectionery. These include sugar glasses boiled sweets grained sugar products fondants toffees and fudges hydrocolloids gums pastilles and jellies and concludes with a chapter dedicated to sugar free confectionery **Sugar Confectionery and Chocolate Manufacture** R. Lees, 2012-12-06 The authors had five objectives in preparing this book i to bring together relevant information on many raw materials used in the manufacture of sweets and chocolate ii to describe the principles involved and to relate them to production with maximum economy but maintaining high quality iii to describe both traditional and modern production processes in particular those continuous methods which are finding increasing application iv to give basic recipes and methods set out in a form for easy reference for producing a large variety of sweets and capable of easy modification to suit the raw materials and plant available v to explain the elementary calculations most likely to be required The various check lists and charts showing the more likely faults and how to eliminate them reflect the fact that art still plays no small part in this industry To help users all over the world whatever units they employ most for mulations are given in parts by weight but tables of conversion factors are provided at the end of the book There also will be found a collection of other general reference data in tabular form while the Glossary explains a number of technical terms many of them peculiar to the industry
