AUTOMATION TESTING

PROS

CONS

PROS

CONS

fast, and accurate feedback

is carried out by a human, therefore, it is prone to errors, omissions, and mistakes

since most of the testing processes are automated, we can get the quick and efficient process

more expensive, as it needs specialized tools or processes which can increase the cost of the entire project

human judgment and intuition are a massive help in the process

manual testing cannot be captured/recorded - it's not reusable

the automation process is scripted; this allows you to reuse, and perform the same test operations

it isn't easy to test the visual aspects such as colors, fonts, contrast, and button sizes

when testing a small change, the automation test would require coding, which would be time-consuming

some tasks are difficult to perform manually, which may require additional testing time

is performed using tools, so it works without random mistakes

each tool has its limitations, which reduces the scope of automation itself

sunscrapers

time-consuming even when it comes to running the same testing scenario

gives fast and accurate results

debugging the test script is another major problem

supports different kinds of applications

maintaining the tests is costly
