Hive Mind Garrett Jones, 2015-11-11 Over the last few decades economists and psychologists have quietly documented the many ways in which a person's IQ matters But research suggests that a nation's IQ matters so much more As Garrett Jones argues in *Hive Mind* modest differences in national IQ can explain most cross country inequalities Whereas IQ scores do a moderately good job of predicting individual wages information processing power and brain size a country's average score is a much stronger bellwether of its overall prosperity Drawing on an expansive array of research from psychology economics management and political science Jones argues that intelligence and cognitive skill are significantly more important on a national level than on an individual one because they have positive spillovers On average people who do better on standardized tests are more patient more cooperative and have better memories As a result these qualities and others necessary to take on the complexity of a modern economy become more

prevalent in a society as national test scores rise What's more when we are surrounded by slightly more patient informed and cooperative neighbors we take on these qualities a bit more ourselves In other words the worker bees in every nation create a hive mind with a power all its own Once the hive is established each individual has only a tiny impact on his or her own life Jones makes the case that through better nutrition and schooling we can raise IQ thereby fostering higher savings rates more productive teams and more effective bureaucracies After demonstrating how test scores that matter little for individuals can mean a world of difference for nations the book leaves readers with policy oriented conclusions and hopeful speculation Whether we lift up the bottom through changing the nature of work institutional improvements or freer immigration it is possible that this period of massive global inequality will be a short season by the standards of human history if we raise our global IQ

Drawing Life Thomas J. Cottle, 2013-11-21 In *Drawing Life* Thomas J. Cottle examines the ways people interpret their life experiences and construct meanings for the events they have encountered. In this manner they discover their various identities and the essence of what we call the self. In reading the sixteen life studies contained in this volume we encounter both inner reflections as well as the power of culture to shape the meanings people give to their circumstances and the events that befall them. The stories also reflect the role of human relationships and social institutions in defining our personal identities and sense of justice. What makes us unique, therefore, is the personal story we tell as it reveals our constructions of the world and of ourselves. The stories recounted in *Drawing Life* illuminate not only our past but also our perceptions of the present and our imaginings of the future. In this way they become anthologies of our life.
