Möglichkeiten der Verwirklichung von Forschungs- und Versuchsergebnissen in der Konstruktion von Maschinen für die schälende Kohलगewinnung Bernhard Sann, 2013-03-14 The forces of the plough from the drive unit to the picks have been discussed Examples have been shown to reduce the forces of cutting and the unusable forces of friction to a minimum

Furthermore it was ensured that the plough remains in the horizon of the seam. An example shows that the production increases by enlarging the depth of the cut of 150 Ofo. By this the force of the cut could be reduced by 40 Ofo at the same time. Resume: Les forces provenant du rabot allant depuis la tête motrice jusqu'aux pieds ont été discutées. Il s'est trouvé des possibilités de réduire au minimum les forces de coupe et les forces inutiles forces de friction et par la même occasion de veiller à ce que la tenue du rabot dans l'horizont de couche soit assurée. Il est possible de prouver l'augmentation de la quantité productive grâce à un agrandissement de 150 % de la profondeur de coupe ce qui entraîne également une réduction d'environ 40 % de la force de traction au tourteau d'entraînement. Möglichkeiten der Verwirklichung von Forschungs- und Versuchsergebnissen in der Konstruktion von Maschinen für die schmelzende Kohलगewinnung. Von Lothar Freytag, Westfalen. Die Behandlung des Blasensteins* Werner H. Hauss, 2013-04-17. Arteriosclerosis is a reactive disease of the vascular wall similar to inflammatory processes. It occurs in connection with a non-specific mesenchymal reaction. It is induced and maintained by a large number of non-specific factors which include the well-known risk factors. The sclerogenic factors attack the vascular wall cells which should be regarded as belonging to the mesenchymal system. The pathological reaction of the vascular wall cells is indispensable for the commencement of the sclerotic process. The changes in wall structure caused by the pathological mesenchymal reaction are decisive factors in the development of secondary pathological symptoms: lipidosis, fibrinosis, necrosis and thrombosis. Measures for the prevention of this condition must take account of the multiple causative factors. The disease is by no means caused solely by wrong eating habits; in particular the excess of fat in the diet, a large number of other factors play a part as has been demonstrated by animal studies. *Cyclische Peptide als Werkzeuge der molekularbiologischen Forschung. Grundlagen und Anwendungsmöglichkeiten von Chemilumineszenz, der Umwandlung von chemischer Energie in Licht* Theodor Wieland, 2013-03-09. The slowly acting amatoxins bind to the DNA-dependent nucleoplasmic RNA polymerase B II which is responsible for the transcription of mRNA. This enables one to discriminate between form B and polymerase A I, the enzyme catalyzing rRNA synthesis and to recognize all biological events depending on mRNA synthesis, protein synthesis after hormonal stimulation, growth of certain virus species etc. Also with the amatoxins is the affinity for the receptor dependent on the conformation visible by ORD and CD. All of the toxic derivatives are inhibitory, whereas not all of the inhibitory ones are toxic. This discrepancy is in part resolved by the observation of nontoxic amanullins dissociating more than ten times faster from the enzyme than toxic ones. The quickly acting phallotoxins bind to a protein closely associated with the cytoplasmic membrane of the liver cell, so causing the formation of microfilaments, the nature of which as actin has been proven by deco-

ration with heavy meromyosin Accordingly phallotoxins also bind to muscle actin which in presence of ADP and Mg immediately polymerizes to a phalloxin containing F actin Ph actin Ph actin is also formed from F actin by reaction with phallotoxins It differs from F actin by its resistance against 0.6 M KI Responsible for its toxic properties is the conformation of the molecule as can be followed by ORD and CD spectroscopy and the presence of a special methyl and hydroxyl group
