international scholars reassess Lippmann's reception in the history of science where he is most recognised by going well beyond his endeavours in France and delving into the complexity of his colour photography as a challenge to various historiographies. Moreover, they analyse colour photographs as optical media, thus pluralising Lippmann photography's ties to art, cultural and imperial history, as well as media archaeology. The contributors also focus on the interferential plate as a material object in need of both preservation and exhibition, one that continues to fascinate contemporary analogue photographers. This volume allows readers to get to know Lippmann, grasp the interdisciplinary complexity of his colourful work and ultimately expand his place in the history of photography.

Colour has long been a source of fascination to both scientists and philosophers. In one sense, colours are in the mind of the beholder; in another sense, they belong to the external world. Colours appear to lie on the boundary where we have divided the world into objective and subjective events. They represent more than any other attribute of our visual experience, a place where both physical and mental properties are interwoven in an intimate and enigmatic way. The last few decades have brought fascinating changes in the way that we think about colour and the role colour plays in our perceptual architecture. In *Colour Perception: Mind and the physical world*, leading scholars from cognitive psychology, philosophy, neurophysiology and computational vision provide an overview of the contemporary developments in our understanding of colours and of the relationship between the mental and the physical. With each chapter followed by critical commentaries, the volume presents a lively and accessible picture of the intellectual traditions which have shaped research into colour perception. Written in a non-technical style and accessible to an interdisciplinary audience, the book will provide an invaluable resource for researchers in colour perception and the cognitive sciences.
