Texas And The Far West:

Our Indian Summer in the Far West Samuel Nugent Townshend, 2016-09-12 In 1879 two Englishmen writer Samuel Nugent Townshend and photographer John George Hyde set out for a pleasant Indian summer on a tour of the American West The duo documented their travels by steamship and train through Philadelphia Pittsburgh and Chicago across the Missouri to the new state of Kansas and the beginning of the western lands and business opportunities that were to become the focus of their narrative Reprinted here with critical notes and introduction Our Indian Summer in the Far West offers an enlightening and often entertaining perspective on an early moment in the growth of capitalism and industry in the American West Originally published as a photographic travelogue and guide to British investment in the American West Townshend and Hyde s account is both idiosyncratic and emblematic of its time Interested in the West s economic and environmental potential the two men focused on farming in Kansas railroads and mining in Colorado a bear hunt in New Mexico and ranching in Texas The sojourners own foibles also enter the narrative alerted to the difficulty of finding a hotel with a bath the two Victorians took along a portable bathtub made of India rubber Their words and pictures speak volumes about contemporary attitudes toward race empire and the future of civilization An introduction by coeditor Alex Hunt provides background on the creators and the travelogue genre The recovery and republication of this extremely rare volume an artifact of the Victorian American West make available an important primary document of a brief but pivotal historical moment connecting the American West and the British Empire

Groundwater Management in El Paso, Texas William Hutchuson, 2006-06 Groundwater represents an important supply source for municipal and irrigation uses in Far West Texas The City of El Paso receives about 50 percent of its municipal water supply from surface water and 50 percent from local groundwater Groundwater pumping in El Paso is from the Hueco Bolson and the Mesilla Bolson Historic groundwater pumping in the Texas portion of the Mesilla Bolson has not resulted in significant changes in groundwater levels or groundwater quality in existing wells Historic pumping in the Hueco Bolson has resulted in lowered groundwater levels and brackish groundwater intrusion The groundwater level declines have resulted in the intrusion of brackish groundwater into areas that historically pumped fresh groundwater A 1979 assessment concluded that El Paso would deplete fresh groundwater in the Hueco Bolson by 2030 if groundwater pumping continued to increase Partly as a result of the 1979 assessment El Paso reduced its groundwater pumping from the Hueco Bolson by increasing surface water diversions from the Rio Grande increasing conservation efforts and increasing reclaimed water use As a result groundwater levels in many parts of the Hueco Bolson have stabilized Brackish groundwater intrusion remains an issue and is being addressed with a brackish groundwater desalination plant currently under construction The new wells and existing wells that will supply this desalination plant will also assist in the management of brackish groundwater intrusion by intercepting the brackish groundwater before it can flow towards existing fresh groundwater wells The 2006 Far West Texas Regional Water Plan contemplates a groundwater transfer project to meet increasing demands in El Paso County beginning about 2030 mostly from the Dell City area in Hudspeth County Texas Groundwater management in the Dell City area is governed by a groundwater conservation district that has established limits on groundwater pumping based on existing and historic uses Groundwater pumping for irrigation began in the Dell City area in 1948 and groundwater levels have been essentially stable for since the 1980s Future planning for a groundwater transfer project will require a detailed
