A Textbook of Histology Harvey Ernest Jordan,1920 *The Center for Research Libraries Catalogue: Monographs*
Center for Research Libraries (U.S.),1969 Hewer's Textbook of Histology for Medical Students S. Bradbury,2014-04-24
Hewer s Textbook of Histology for Medical Students Ninth Edition Revised focuses on the minute structure of the cells
tissues and organs of the human body and the reactions of tissues and cells to various conditions The publication first
elaborates on the techniques used in the study of cells and tissues cell and cell division and epithelia Discussions focus on the
qualitative and quantitative methods for the identification of the composition of cells and tissues surface membrane of the
cell cytoplasmic contents and the nucleus The text then examines blood and lymph development and destruction of blood
corpuscles and connective tissues The manuscript takes a look at adipose tissue cartilage and bone including development
and functions of adipose tissue hyaline cartilage fibro cartilage elastic cartilage and joints and synovial membranes The book
then ponders on muscular tissue nervous tissue peripheral nerves ganglia neuroglia and meninges blood circulatory system
lymphatic system thymus and spleen and adrenals thyroid and parathyroid glands The publication is a valuable reference for
medical students and readers interested in the structure of the cells organs and tissues of the human body **The**

Lloyd,1898 **Biological Micro- and Nanotribology** Matthias Scherge,Stanislav S. N. Gorb,2013-11-11 Ever since the
genesis of life and throughout the course its further evolution Nature has constantly been called upon to act as an engineer
in solving technical problems Organisms have evolved a variety of well defined shapes and structures Although often
intricate and fragile they can nonetheless deal with extreme mechanical loads Some organisms live attached to a substrate
others can also move fly swim and dive These abilities and many more are based on a variety of ingenious structural solutions
Understanding these is of major scientific interest since it can give insights into the workings of Nature in evolutionary
processes Beyond that we can discover the detailed chemical and physical properties of the materials which have evolved can
learn about their use as structural elements and their biological role and function This knowledge is also highly relevant for
technical applications by humans Many of the greatest challenges for today s engineering science involve miniaturization
Insects and other small living creatures have solved many of the same problems during their evolution Zoologists and
morphologists have collected an immense amount of information about the structure of such living micromechanical systems
We have now reached a sophistication beyond the pure descriptive level Today advances in physics and chemistry enable us
to measure the adhesion friction stress and wear of biological structures on the micro and nanonewton scale Furthermore
the chemical composition and properties of natural adhesives and lubricants are accessible to chemical analysis

Bacha Jr.,Linda M. Bacha,2012-01-19 Designed to provide students with a foundation in understanding and interpreting histologic and cytologic preparations Color Atlas of Veterinary Histology is a practical benchside reference focusing on the normal histology of eight common domestic species This Third Edition has been revised with new images information and updated terminology throughout Introductory chapters have also been expanded to offer more complete coverage of the basic types of tissues providing an even more thorough grounding in the principles of histology For the first time the more than 900 photomicrographs are available digitally in an interactive atlas on CD offering images available for download with zoom capability The new edition of this veterinary specific histology atlas provides veterinary and veterinary technician students with an essential pictorial resource for interpreting histologic preparations **Cilia, Ciliated Epithelium, and Ciliary Activity** José A.
