McLaughlin,2012-12-06 The Australasia Pacific Region supports approximately 50% of the world's population. The last half century has witnessed a rapid increase in the regional population, agricultural productivity, industrial activities and trade within the region. Both the demand for increased food production and the desire to improve the economic conditions have affected regional environmental quality. This volume presents an overview of the fate of contaminants in the soil environment, current soil management factors used to control contaminant impacts, issues related to sludge and effluent disposals in the soil environment, legal, health and social impacts of contaminated land, remediation approaches and strategies to manage contaminated land, some of the problems associated with environmental degradation in the Australasia Pacific Region and steps that we need to take to safeguard our environment    [Parliamentary Assembly, Working Papers](#) BERNAN ASSOC,2008-06-30    [Communicating about Risks to Environment and Health in Europe](#) Philip C.R. Gray,Richard M. Stern,Marco Biocca,2013-04-18 Public experience with risk communication differs greatly from country to country in Europe and there has been little opportunity for the transfer of experience and learning between countries. This is especially true for the many new European States including the countries in transition from centralised to market economies. This book presents case studies on risk communication. One of its unifying concepts is the role of risk communication in the risk management process. Technical and philosophical introductions to risk communication and risk management and research in risk communication are given. The case studies themselves occupy the central portion of the book, each one covering a particular hazard/risk or situation seen from a particular point of view. The issue of the special circumstances for environmental and health risk communication in central and eastern Europe is also addressed through a separate presentation and discussion of an appropriate case study. A different approach to risk communication is taken by examining how it forms part of the risk management process at the local level. Research into risk perception, a field that forms an important foundation for many aspects of risk communication, is summarised and practical guidelines for risk communication are reviewed. These include discussions on how to carry out public information programmes and methods for increasing public involvement in risk management decisions    [Clean-up of Former Soviet Military Installations](#) Roy C. Herndon,John E. Moerlins,J. Michael Kuperberg,Peter I. Richter,Imre L. Biczo,2013-04-17 A NATO Advanced Research Workshop ARW was conducted on June 21-23 1994 in Visegrad Hungary related to the clean up of former Soviet military installation sites. This ARW included a technical site visit to the Komarom Base Site which is a former Soviet military installation in Hungary. During this three day ARW a strategy and set of recommendations were developed for selecting technologies and evaluating remediation as the economic and approaches for these sites. This strategy incorporated such critical issues financial conditions of the region, temporal considerations with regard to the urgency for which remedial actions are needed for these sites, the prioritization of resource allocations for site clean up using risk based considerations.

and other crucial issues which will affect the implementation of remedial activities in the region. Approximately 40 invited experts representing a number of different disciplines as well as both NATO and Cooperation Partner countries from the region participated in this ARW. The types of former Soviet military installations in Central and Eastern Europe include aircraft bases, fueling areas, maintenance and repair facilities, training grounds, non-ammunition storage areas, lubricants, chemicals, paints, equipment, ammunition storage areas, medical facilities, production facilities, and municipal facilities. Environmental contamination at these sites poses significant human health and environmental risks. Site contaminants include solvents e.g. BTEX, mineral oil, hydrocarbons, polycyclic aromatic hydrocarbons, PAHs, chlorinated hydrocarbons, heavy metals, pesticides, residues, and polychlorinated biphenyls, PCBs. The primary environmental media adversely affected by these contaminants are soils, ground water, and surface water.
