Microprocessor Architectures Steve Heath, 2014-06-28 Why are there all these different processor architectures and what  
do they all mean Which processor will I use How should I choose it Given the task of selecting an architecture or design  
approach both engineers and managers require a knowledge of the whole system and an explanation of the design tradeoffs  
and their effects This is information that rarely appears in data sheets or user manuals This book fills that knowledge gap  
Section 1 provides a primer and history of the three basic microprocessor architectures Section 2 describes the ways in  
which the architectures react with the system Section 3 looks at some more commercial aspects such as semiconductor  
technology the design cycle and selection criteria The appendices provide benchmarking data and binary compatibility  
standards Since the first edition of this book was published much has happened within the industry The Power PC  
architecture has appeared and RISC has become a more significant challenger to CISC The book now includes new material  
on Power PC and a complete chapter devoted to understanding the RISC challenge The examples used in the text have been  
based on Motorola microprocessor families but the system considerations are also applicable to other processors For this  
reason comparisons to other designs have been included and an overview of other processors including the Intel 80x86 and  
Pentium DEC Alpha SUN Sparc and MIPS range has been given Steve Heath has been involved in the design and  
development of microprocessor based systems since 1982 These designs have included VMEbus systems microcontrollers  
IBM PCs Apple Macintoshes and both CISC and RISC based multiprocessor systems while using operating systems as varied  
as MS DOS UNIX Macintosh OS and real time kernels An avid user of computer systems he has written numerous articles  
and papers for the electronics press as well as books from Butterworth Heinemann including VMEbus A Practical Companion
