Social Contract A Personal Inquiry Into:

The Social Contract Robert Ardrey, 1970 This title denies that men are created equal Jacket Dr. Calhoun's Mousery Lee Alan Dugatkin, 2024-10-03 A bizarre and compelling biography of a scientist and his work using rodent cities to question the potential catastrophes of human overpopulation It was the strangest of experiments What began as a utopian environment where mice had sumptuous accommodations had all the food and water they could want and were free from disease and predators turned into a mouse hell Science writer and animal behaviorist Lee Alan Dugatkin introduces readers to the peculiar work of rodent researcher John Bumpass Calhoun In this enthralling tale Dugatkin shows how an ecologist turned psychologist turned futurist became a science rock star embedded in the culture of the 1960s and 1970s As interest grew in his rodent cities Calhoun was courted by city planners and his work was reflected in everything from Tom Wolfe's hard hitting writing to the children's book *Mrs Frisby and the Rats of NIMH* He was invited to meetings with the Royal Society and the pope and taken seriously when he proposed a worldwide cybernetic brain a decade before others made the internet a reality Readers see how Calhoun's experiments rodent apartment complexes like *Mouse Universe 25* led to his concept of behavioral sinks with real effects on public policy discussions Overpopulation in Calhoun's mouse and rat complexes led to the loss of sex drive the absence of maternal care and a class of automatons that included the beautiful ones who spent their time grooming themselves while shunning socialization Calhoun and those who followed his work saw the collapse of this mouse population as a harbinger of the ill effects of an overpopulated human world Drawing on previously unpublished archival research and interviews with Calhoun's family and former colleagues Dugatkin offers a riveting account of an intriguing scientific figure Considering Dr Calhoun's experiments he explores the changing nature of scientific research and delves into what the study of animal behavior can teach us about ourselves

On Human Nature Jonathan H. Turner, 2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex
