Social History Of Truth Civility And Science In Seventeenth Century England:

A Social History of Truth Steven Shapin, 2011-11-18 How do we come to trust our knowledge of the world What are the means by which we distinguish true from false accounts Why do we credit one observational statement over another In *A Social History of Truth* Shapin engages these universal questions through an elegant recreation of a crucial period in the history of early modern science the social world of gentlemen philosophers in seventeenth century England Steven Shapin paints a vivid picture of the relations between gentlemanly culture and scientific practice He argues that problems of credibility in science were practically solved through the codes and conventions of genteel conduct trust civility honor and integrity These codes formed and arguably still form an important basis for securing reliable knowledge about the natural world Shapin uses detailed historical narrative to argue about the establishment of factual knowledge both in science and in everyday practice Accounts of the mores and manners of gentlemen philosophers are used to illustrate Shapin's broad claim that trust is imperative for constituting every kind of knowledge Knowledge making is always a collective enterprise people have to know whom to trust in order to know something about the natural world [Science as Child's Play in](#)

[Seventeenth-Century England](#) Elizabeth L. Swann, 2025-01-31 In recent decades scholars have uncovered the vital contributions made by non elite figures including women artisans and indigenous peoples to the development of early modern natural philosophy This Palgrave Pivot argues that children too quite literally played a decisive role in seventeenth century experimental science in England both as rhetorical exemplars and as active contributors in the generation of natural knowledge Exploring a widespread but critically neglected connection between experiment and child's play it both illuminates the extent to which children participated intentionally or incidentally in natural historical and experimental activities and investigates how ideas about childish innocence and sensory receptivity informed the nascent ideology of scientific objectivity In the work of figures associated with the early Royal Society this book proposes children emerge as instinctive empiricists and experimenters setting in motion a broader cultural transformation in ideas about childhood and education which still shapes how we think about these things today **The Poetics of Scientific Investigation in**

Seventeenth-century England Claire Preston, 2015 This study examines the way that scientists in the 16th and 17th centuries who had not studied science formally used the tools of their literary education to formulate ideas about science and at the same time how the remarkable 17th century scientific developments inspired non scientific writers to make new fictions of discovery **Common Law and Enlightenment in England, 1689-1750** Julia Rudolph, 2013 The book

demonstrates how the common law mind was able to meet the various challenges posed by Enlightenment rationalism and civic and commercial discourse revealing that the common law played a much wider role beyond the legal world in shaping Enlightenment concepts **Protestant Autobiography in the Seventeenth-Century Anglophone World** Kathleen

Lynch, 2012-03-22 Autobiographical narrative is seldom viewed as a catalyst for the social and political upheavals of mid

seventeenth century England and its colonies Protestant Autobiography in the Seventeenth Century Anglophone World argues that it should be Focusing on the inward search for signs of election as a powerful stimulus for new written forms of self identification this study directs critical attention toward the collective processes through which truthful texts of spiritual experience were constructed validated and endorsed This new analysis of the rhetoric of authentic selfhood emphasizes the ways in which personal accounts of religious awakening became another opportunity to conceptualize experience as an authorizing principle A broad spectrum of Protestant life writing is explored from Augustine s Confessions first translated into English in 1620 through John Bunyan s Grace Abounding to the Chief of Sinners 1666 and Richard Baxter s Reliquiae Baxterianae 1696 The forms in which these landmark texts were circulated and the interests that those circulations served are examined in such a way as to put canonical texts back into conversation with the outpouring of individual life writings that dates from the middle of the 17th century on As the first new historicized account of the seventeenth century Protestant conversion narrative in a generation Protestant Autobiography in the Seventeenth Century Anglophone World contributes to the reintegration of the scholarly fields of literature religion and politics It revitalizes the study of proto literary forms which while devotional in nature were deeply political in their consequences contributing as they did to the emerging discourse of personal liberties

How Modern Science Came into the World Floris Cohen, 2025-10-01 Once upon a time The Scientific Revolution of the 17th century was an innovative concept that inspired a stimulating narrative of how modern science came into the world Half a century later what we now know as the master narrative serves rather as a strait jacket so often events and contexts just fail to fit in No attempt has been made so far to replace the master narrative H Floris Cohen now comes up with precisely such a replacement Key to his path breaking analysis cum narrative is a vision of the Scientific Revolution as made up of six distinct yet narrowly interconnected revolutionary transformations each of some twenty five to thirty years duration This vision enables him to explain how modern science could come about in Europe rather than in Greece China or the Islamic world It also enables him to explain how half way into the 17th century a vast crisis of legitimacy could arise and in the end be overcome Building forth on his earlier *The Scientific Revolution A Historiographical Inquiry* 1994 his new book takes the latest researches duly into account while connecting these in highly innovative ways It is meant throughout as a constructive effort to break up all too deeply frozen patterns of thinking about the history of science

Medicine, Religion, and Magic in Early Stuart England Ofer Hadass, 2018-03-26 The astrologer physician Richard Napier 1559 1634 was not only a man of practical science and medicine but also a master of occult arts and a devout parish rector who purportedly held conversations with angels This new interpretation of Napier reveals him to be a coherent and methodical man whose burning desire for certain true knowledge contributed to the contemporary venture of putting existing knowledge to useful ends Originally trained in theology and ordained as an Anglican priest Napier later studied astrological medicine and combined astrology religious thought and image and ritual magic in his medical work Ofer Hadass draws on a remarkable archive of Napier s medical cases and religious writings including the interviews he claimed to have held with angels to show how Napier s seemingly inconsistent approaches were rooted in an inclusive and coherent worldview combining equal respect for ancient authority and for experientially derived knowledge Napier s endeavors exemplify the fruitful relationship between religion and science that offered a well founded alternative to the rising mechanistic explanation of nature at the time Carefully researched and compellingly told *Medicine Religion and Magic in Early Stuart England* is an insightful exploration of one of the most fascinating figures at the intersection of medicine magic and theology in early modern England and of the healing methods employed by physicians of the era

Communicating Science Alan G. Gross, Joseph E. Harmon, Michael S. Reidy, 2002 This book describes the development of the scientific article from its modest beginnings to the global phenomenon that it has become today The authors focus on changes in the style organization and argumentative structure of scientific communication over time This outstanding resource is the definitive study on the rhetoric of science

With Words and Knives Lynda Payne, 2016-02-11 The practice of medicine in the days before the development of anaesthetics

could often be a brutal and painful experience Many procedures especially those involving surgery must have proved almost as distressing to the doctor as to the patient Yet in order to cure the medical practitioner was often required to inflict pain and the patient to endure it Some level of detachment has always been required of the doctor and especially of the surgeon It is the construction of this detachment or dispassion in early modern England with which this work is concerned The book explores the idea of medical dispassion and shows how practitioners developed the intellectual verbal and manual skill of being able to replace passion with equanimity and distance As the skill of dispassion became more widespread it was both enthusiastically promoted and vehemently attacked by scientific and literary writers throughout the early modern period To explain why the practice was so controversial and aroused such furor this study takes into account not only patterns of medical education and clinical practice but wider debates concerning social philosophical and religious ideas

Wrestling with Nature Peter Harrison, Ronald L. Numbers, Michael H. Shank, 2011-05-01 When and where did science begin Historians have offered different answers to these questions some pointing to Babylonian observational astronomy some to the speculations of natural philosophers of ancient Greece Others have opted for early modern Europe which saw the triumph of Copernicanism and the birth of experimental science while yet another view is that the appearance of science was postponed until the nineteenth century Rather than posit a modern definition of science and search for evidence of it in the past the contributors to *Wrestling with Nature* examine how students of nature themselves in various cultures and periods of history have understood and represented their work The aim of each chapter is to explain the content goals methods practices and institutions associated with the investigation of nature and to articulate the strengths limitations and boundaries of these efforts from the perspective of the researchers themselves With contributions from experts representing different historical periods and different disciplinary specializations this volume offers a fresh perspective on the history of science and on what it meant in other times and places to wrestle with nature

Natural Science and the Origins of the British Empire Sarah Irving, 2015-09-30 Represents a history of the British Empire that takes account of the sense of empire as intellectual as well as geographic dominion the historiography of the British Empire with its preoccupation of empire as geographically unchallenged sovereignty overlooks the idea of empire as intellectual dominion

Why an Afterlife Obviously Exists Jens Amberts, 2022-04-29 Like a master attorney Jens Amberts has marshaled an abundance of virtually irrefutable evidence in making the case for the thesis of his

brilliant book *Why an Afterlife Obviously Exists* Basing his argument on four fundamental facts about near death experiences NDEs Amberts has written a book that every serious student of NDEs and especially skeptics should be sure to read On finishing it I doubt any reader will not be convinced that death is not a dead end Kenneth Ring Ph D Professor Emeritus of Psychology University of Connecticut author of *Lessons from the Light* *Why an Afterlife Obviously Exists* is a philosophical argument demonstrating why the existence of an afterlife is beyond astronomically likely and hence empirically certain It explains how we have every rational reason to think that people who have near death experiences are not only telling the truth but the book also argues that near death experiencers are thoroughly justified in knowing that they visited the actual afterlife

Travels into Print Innes M. Keighren, Charles W. J. Withers, Bill Bell, 2015-05-11 In eighteenth and nineteenth century Britain books of travel and exploration were much more than simply the printed experiences of intrepid authors They were works of both artistry and industry products of the complex and often contested relationships between authors and editors publishers and printers These books captivated the reading public and played a vital role in creating new geographical truths In an age of global wonder and of expanding empires there was no publisher more renowned for its travel books than the House of John Murray Drawing on detailed examination of the John Murray Archive of manuscripts images and the firm's correspondence with its many authors a list that included such illustrious explorers and scientists as Charles Darwin and Charles Lyell and literary giants like Jane Austen Lord Byron and Sir Walter Scott *Travels into Print* considers how journeys of exploration became published accounts and how travelers sought to demonstrate the faithfulness of their written testimony and to secure their personal credibility This fascinating study in historical geography and book history takes modern readers on a journey into the nature of exploration the production of authority in published travel narratives and the creation of geographical authorship a journey bound together by the unifying force of a world leading publisher

Knowledge, Information, and Business Education in the British Atlantic World, 1620-1760 Siobhan Talbott, 2025-02-10 Accurate information is essential to successful business activity The early modern period saw an increase in printed commercial information including newspapers printed exchange rates and educational texts part of the print revolution that permeated all aspects of the early modern world Rather than relying on externally produced printed works commercial agents retained agency in creating and sharing their own business and educational information which was shared in other forms and prioritised and valued over printed material This book explores the ways that merchants and other commercial agents learned about business in the early modern British Atlantic World It considers how they acquired

dispersed stored and used information as well as considering their contribution to creating and shaping that information.
