Social Philosophy And Ecological Scarcity:

Social Philosophy and Ecological Scarcity Keekok Lee, 2019-09-18 Originally published in 1989 Social Philosophy and Ecological Scarcity presents a systematic study of the implications of ecological scarcity for social philosophy The book argues for a new social philosophy based on a conception of the good society and the good life which makes fewer rather than more demands on scarce ecological resources The book shows that the two major competing social philosophies in modern philosophical thought the bourgeois liberal and the state socialist are both forms of capitalism Despite their obvious differences they both pursue the logic of capitalism of ever increasing accumulation growth and consumption This pursuit is carried out by means of modern science and its technology which assume that Nature s resources are inexhaustible and can be exploited to meet infinite human wants or needs ignoring ecological scarcity The recognition of ecological scarcity would lead to a social philosophy based on a frugal mode of socialism which has more affinities with the social visions of Fourier and Morris than with that of Marx Their theories far from being too utopian are shown as more realistic and less fantastic than either bourgeois capitalism or state capitalism based on the Marxist model

the environment within philosophy and ethics the social sciences and the arts and analyses their role in the formation of environmental cognition

The Natural and the Artefactual Keekok Lee, 1999-01-01 In this book philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism that if we could reduce or eliminate pollution we could save the planet without unduly disrupting our modern industrialized societies Lee argues instead that the process of modernization with its attendant emphasis on technological innovation has fundamentally transformed nature into just another manmade artefact Ultimately what needs to be determined is if nature has value above and beyond human considerations whether aesthetic spiritual or biological This provocative book attempts to reconfigure environmental ethics positing the existence of two separate ontological categories the natural and the artefactual Natural entities be they organisms or inert matter are morally considerable because they possess the ontological value of independence whereas artefacts are created by humans expressly to serve their own interests and ends

Goodin, 2013-04-30 With their remarkable electoral successes Green parties worldwide seized the political imagination of friends and foes alike Mainstream politicians busily disparage them and imitate them in turn This new book shows that greens deserve to be taken more seriously than that This is the first full length philosophical discussion of the green political programme Goodin shows that green public policy proposals are unified by a single coherent moral vision a green theory of value that is largely independent of the green theory of agency dictating green political mechanisms strategies and tactics on the one hand and personal lifestyle recommendations on the other The upshot is that we demand that politicians implement green public policies and implement them completely without committing ourselves to the other often more eccentric aspects of green doctrine that threaten to alienate so many potential supporters *Political Ideologies* Robert Eccleshall, Vincent Geoghegan, Richard Jay, Michael Keeny, Ian MacKenzie, Richard Wilford, 2014-03-21 Now in its fourth edition *Political Ideologies An Introduction* continues to be the best introductory textbook for students of political ideologies Completely revised and updated throughout this edition features A comprehensive introduction to all of the most important ideologies Brand new chapters on multiculturalism anarchism and the growing influence of religion on politics More contemporary examples of twenty first century iterations of liberalism socialism conservatism fascism green political theory nationalism and feminism Enhanced discussion of the end of ideology debates and emerging theories of ideological formation Six new contributors Accessible and packed with both historical and contemporary examples this is the most useful textbooks for scholars and students of political ideologies The contributors to this volume have all taught or carried out research at the School of Politics International Studies and Philosophy of Queen s University Belfast or have close research connections with the School **Reconstructing Nature** Peter Dickens, 2002-11-01 One of the main features of the contemporary environmental crisis is that no one has a clear idea of what is going on The author uses an extension of Marx s theory of alienation to explain why people find it so difficult to relate their different knowledges of the natural and social world He argues that nevertheless it is possible to relate these to the abstractions of ecological discourse Emancipation can come only through embracing science and rationality rather than rejecting them and in the process humanity as well as the non human world will benefit *Foundations of Futures Studies, Volume 1* Wendell Bell, Futures studies is a new field of inquiry involving systematic and explicit thinking about alternative futures It aims to demystify the future make possibilities for the future more known to us and increase human control over the future Author Wendell Bell brings together futurist intellectual tools describing and explaining not only the methods but also the nature concepts theories and exemplars of the field Now available in paperback with a new preface from the author *Foundations of Future Studies* is the fundamental work on the subject Bell illustrates how this sphere of intellectual activity
