The International Handbook of Educational Research in the Asia-Pacific Region J.P. Keeves, Ryo Watanabe, 2013-11-11 The aim of the Handbook is to present readily accessible but scholarly sources of information about educational research in the Asia Pacific region The scale and scope of the Handbook is such that the articles included in it provide substantive contributions to knowledge and understanding of education in the Asia region In so doing the articles present the problems and issues facing education in the region and the findings of research conducted within the region that contribute to the resolution of these problems and issues Moreover since new problems and issues are constantly arising the articles in the Handbook also indicate the likely directions of future developments The different articles within the Handbook seek to conceptualize the problems in each specific content area under review provide an integration of the research conducted within that area the theoretical basis of the research the

practical implications of the research and the contribution of the research towards the resolution of the problems identified. Thus the articles do not involve the reporting of newly conducted research but rather require a synthesis of the research undertaken in a particular area with reference to the research methods employed and the theoretical frameworks on which the research is based. In general the articles do not advocate a single point of view but rather present alternative points of view and comment on the debate and disagreements associated with the conduct and findings of the research. Furthermore it should be noted that the Handbook is not concerned with research methodology and only considers the methods employed in inquiry in so far as the particular methods of research contribute to the effective investigation of problems and issues that have arisen in the conduct and provision of education at different levels within the region. Krauss, Elizabeth Midlarsky, R. Wesner, 2006-06-14 During the 1940s teachers were certain they had some grievous complaints about students' behavior in school. Among these were excessive noise, littering and gum chewing. More recently teachers' concerns have taken on a far more dire tone. Today their focus is on the rape, robbery and substance abuse incidents that occur in alarming numbers in their workplaces. In recent years the news on violent crime in our schools has often been devastating. And although school officials have begun taking measures to decrease the level of violence on their grounds, e.g. installing metal detectors, hiring guards to patrol hallways, the violence that continues to occur is often more lethal and no less troubling. To further understand and ameliorate the causes of violence among our children, especially at school, this book takes a comprehensive approach to addressing the issues. *Violence in Schools: Cross National and Cross Cultural Perspectives* provides both a broad overview of violence in schools and offers specific descriptions of models that have been used successfully within school settings to prevent violent crime from occurring. For example, this volume recognizes that violence on school grounds is a global problem that requires an international perspective to counteract. It takes a broad view of what constitutes violence; that is, the focus is not only on physical assault but the neglect and abusive behavior, e.g. racism, sexism, cultural discrimination and suppression that contribute to its occurrence. It explores the history of the phenomenon of school violence in order to effectively ameliorate its current condition. *Violence in Schools: Cross National and Cross Cultural Perspectives* speaks with legitimate authority to scholars as well as to those on the frontlines in combating school violence, including school and counseling psychologists, school administrators, teachers and staff as well as concerned parents.

The Normative Animal? Neil Roughley, Kurt Bayertz, 2019-06-11 It is often claimed that humans are rational linguistic cultural or moral creatures What these characterizations may all have in common is the more fundamental claim that humans are normative animals in the sense that they are creatures whose lives are structured at a fundamental level by their relationships to norms The various capacities singled out by discussion of rational linguistic cultural or moral animals might then all essentially involve an orientation to obligations permissions and prohibitions And if this is so then perhaps it is a basic susceptibility or proclivity to normative or deontic regulation of thought and behavior that enables humans to develop the various specific features of their life form This volume of new essays investigates the claim that humans are essentially normative animals in this sense The contributors do so by looking at the nature and relations of three types of norms or putative norms social moral and linguistic and asking whether they might all be different expressions of one basic structure unique to humankind These questions are posed by philosophers primatologists behavioral biologists psychologists linguists and cultural anthropologists who have collaborated on this topic for many years The contributors are committed to the idea that understanding normativity is a two way process involving a close interaction between conceptual clarification and empirical research
