Social Psychology Of Self Referent Behavior:

Social Psychology of Self-Referent Behavior Howard B. Kaplan, 1986-11-30 This book is about human behavior and more particularly about a class of human behaviors those behaviors by people that have themselves as the object of their behaviors These self referent behaviors are social in nature in the sense that in large measure they are the outcomes of pervasive social processes and are themselves major influences on social outcomes As such self referent behaviors have the potential to be significant organizing constructs in the study of the broader field of social psychology In any case they are regarded here as of intrinsic interest and are the focus of this volume Four broad categories of self referent behaviors are considered with regard to their social bases and consequences as these are revealed in the social psychological and sociological literature With appropriate discriminations made within each group ing the four categories are self conceiving self evaluating self feeling and self protective self enhancing responses Following a consideration of the social antecedents and consequences of each category of self referent behaviors I present a final summary statement that outlines a theoretical model of the additive and interactive social influences on and consequences of the mutually influential self referent behaviors The outline of the theoretical model reflects my synthesis of the apparently relevant theoretical and empirical literature and is intended to function as a framework for the orderly incorporation of new theoretical assertions and more or less apparently relevant empirical associations

Handbook of the Sociology of Emotions Jan Stets, Jonathan H. Turner, 2007-02-25 For almost thirty years sociologists have increasingly theorized about and conducted research on human emotions Surprisingly it was not until the 1970s that the sociology of emotions emerged

as a coherent field of inquiry What makes this late date surprising is that it is now obvious that human behavior interaction and organization are driven by emotions It was an immense oversight for emotions to be de emphasized in sociological theorizing and research for most of its 175 year history Since the 1970s however the study of emotions has accelerated and is now at the forefront of sociological analysis This book is designed to bring the reader up to date on the theory and research traditions that have proliferated in the analysis of human emotions Key figures who have carried the sociology of emotions to its current level of prominence review their own work and the work of others who have made contributions to a particular approach to the study of emotions The outcome is a comprehensive book that serves as a primer on the cutting edge of sociological work in what is obviously a key dynamic in human affairs The first section of the book addresses the range of emotions and how they can be classified the neurological underpinnings of emotions and the effect of gender on emotions The second section reviews the prominent sociological theories of emotions including theories emphasizing power and status rituals identity and self psychoanalytic dynamics exchange expectation states and evolution While there is little integration among these theories this state of affairs will not last forever The third section addresses theory and research on specific emotions such as love jealousy and envy empathy sympathy anger grief and the moral emotions While this list does not exhaust the range of human feeling they are central emotions that drive human behavior interaction and social organization The last section explores how the study of emotions has added new insight into other subfields within sociology such as the study of the workplace health and social movements These chapters illustrate how the sociology of emotions can provide new research and theory for the large numbers of specialties within sociology Although no book can completely cover a field even a relatively new one like the sociology of emotions this Handbook of the Sociology of Emotions comes close to being comprehensive The reader will come away with a greater appreciation for how far the sociology of emotions has developed and prospered over the last thirty years

Self-Defeating Behaviors Rebecca C. Curtis, 2013-11-11 In the desert I saw a creature naked bestial Who squatting upon the ground Held his heart in his hands And ate of it I said Is it good friend It is bitter bitter he answered But I like it Because it is bitter And because it is my heart Stephen Crane The Black Riders and Other Lines It is the function of great art to purge and give meaning to human suffering wrote Bernard Knox 1982 p 149 in his introduction to Oedipus Rex This is done by showing some causal connection between the hero s free will and his suffer ing by bringing to the fore the interplay of the forces of destiny and human freedom Knox states that Freud was wrong when he suggested that it was the particular nature of the material in Oedipus that makes the play so deeply moving and not the contrast between destiny and human will Knox believes that this play has an overpowering effect upon us not only because we share the tendency of Oedipus to direct

our first sexual impulse towards our mother and our first murderous wish against our father as Freud tells us but also because the theological modification of the legend introduced by Sophocles calls into question the sacred beliefs of our time Knox 1982 pp 133 137 *Communication, Social Cognition, and Affect* Lewis Donohew, Howard E. Sypher, Edward Tory Higgins, 1988 Mounting attention in the research literature has been paid to the roles of social cognition and affect in the communication process This tightly knit collection presents the most current original research in this area from leading researchers in communication and psychology The volume presents a well integrated account of important interdisciplinary approaches to communication processes cognitive processes and behavior Perception of Self in Emotional Disorder and Psychotherapy Lorne M. Hartman, Kirk R. Blankstein, 2013-11-11 One's view of self has pervasive and significant effects socially psychologically and even biologically Regardless of theoretical differences most psychotherapists agree that perception of self in one way or another profoundly impacts emotional satisfaction behavioral adaptation and rational thinking Self acceptance has played a major role in almost every major theory of personality Despite its recognized importance over the years only recently has the perception of self received vigorous research attention as a central variable in the development and maintenance of psychological dysfunction and as a mediating mechanism in effecting psychological change Several lines of evidence point to the importance of self perception in emotional disorder and psychotherapy Feelings of inadequacy and unworthiness are frequently cited complaints among persons seeking psychological help People with low self esteem see themselves as helpless and inferior They feel incapable of improving their situation They fail to evidence the requisite inner resources or coping abilities for tolerating the stress of their life situation The ability to be involved in healthy intimate relationships to engage in successful career performance to experience satisfactory sexual functioning or to maintain effective mood management are all subject to disruption as a result of inconsistent and impaired self appraisal

Attention and Self-Regulation C. S. Carver,M. F. Scheier,2012-12-06 Seek simplicity and distrust it Alfred North Whitehead It will become all too clear that an ability to see patterns in behavior an ability that some might feel proud of can lead more easily to a wrong description than a right one William T Powers The goal of the theorist the scholar is to take a collection of observations of the world and perceive order in them This process necessarily imposes an artificial simplicity upon those observations That is specific observations are weighed differently from each other whenever a theoretical account is abstracted from raw experiences Some observed events are misunderstood or distorted others are seen as representing random fluctuations and are ignored and yet others are viewed as centrally important This abstraction and oversimplification of reality is inevitable in theory construction Moreover the abstracted vision builds upon itself That is as a structure begins to emerge from continued observation the structure itself guides the search for new information The result is a construction that is more elaborate than what existed before but it still is usually simpler than reality It is important for scholars to believe in the value of their task and in the general correctness of the vision that guides their work This commitment and the hope of progress that follows from it make it possible to continue even when the work is difficult and
